Interactivity in E-Learning: Case Studies and Frameworks Wang, Haomin, 2011-12-31 This book provides a comprehensive examination of interactivity combining key perspectives from communication and media studies distributed cognition system affordances user control and social interaction intended for researchers working in the fields of communication and media educational media e learning and instructional technology Provided by publisher

Communications Infrastructure, Systems and Applications Rashid Mehmood, Eduardo Cerqueira, Radoslaw Piesiewicz, Imrich Chlamtac, 2009-12-18 The First International ICST Conference on Communications Infrastructure Systems and Applications in Europe EuropeComm 2009 was held August 11-13 2009 in London EuropeComm 2009 brought together decision makers from the EU communication top researchers and industry executives to discuss the directions of communications research and development in Europe The event also attracted academia and industry representatives as well as government officials to discuss the current developments and future trends in technology applications and services in the communications field Organizing this conference was motivated by the fact that the development and deployment of future services will require a common global scale infrastructure and therefore it is important that designers and stakeholders from all the systems stacks come together to discuss these developments Rapidly decreasing costs of computational power storage capacity and communication bandwidth have led to the development of a multitude of applications carrying an increasingly huge amount of traffic on the global networking infrastructure What we have seen is an evolution an infrastructure looking for networked applications has evolved into an infrastructure struggling to meet the social technological and business challenges posed by the plethora of bandwidth hungry emerging applications

The SAGE Encyclopedia of Educational Technology J. Michael Spector, 2015-01-29 The SAGE Encyclopedia of Educational Technology examines information on leveraging the power of technology to support teaching and learning While using innovative technology to educate individuals is certainly not a new topic how it is approached adapted and used toward the services of achieving real gains in student performance is

extremely pertinent This two volume encyclopedia explores such issues focusing on core topics and issues that will retain relevance in the face of perpetually evolving devices services and specific techniques As technology evolves and becomes even more low cost easy to use and more accessible the education sector will evolve alongside it For instance issues surrounding reasoning behind how one study has shown students retain information better in traditional print formats are a topic explored within the pages of this new encyclopedia Features A collection of 300 350 entries are organized in A to Z fashion in 2 volumes available in a choice of print or electronic formats Entries authored by key figures in the field conclude with cross references and further readings A detailed index the Reader s Guide themes and cross references combine for search and browse in the electronic version This reference encyclopedia is a reliable and precise source on educational technology and a must have reference for all academic libraries

Collaborative Learning in a Global World Miri Shonfeld,David Gibson,2018-11-06 This book explores the impact of global changes on education emphasizing the need for collaborative learning skills It highlights the importance of training teachers in teamwork to serve as role models and addresses the rapid pace of new practices The book provides theoretical guidance and practical examples to bridge research gaps

Object-oriented System Development Dennis De Champeaux,Douglas Lea,Penelope Faure,1993 With this book software engineers project managers and tool builders will be able to better understand the role of analysis and design in the object oriented OO software development process This book presents a minimum set of notions and shows the reader how to use these notions for OO software construction The emphasis is on development principles and implementation

Electronic Design Automation Frameworks F. J. Rammig,Ron Waxman,1991 During the last decade the field of electronic design automation has changed from a small industry offering a random sampling of commercial and academic design automation tools to a significant industry comprising offerings ranging from individual tools to total design systems all based upon a set of emerging standards Workers in electronic design automation are active in the development of integrated design environments and therefore in the development of frameworks Frameworks for electronic design automation are rather similar to those for mechanical or software engineering however the class of tools may differ resulting in differing specific requirements for the services to be offered The present book documents the results of the 2nd Workshop on electronic design automation frameworks The question of standardization is of special interest within the book especially as related to VHDL EDIF PDES and CFI Also included are discussions of the role of specialized languages for specific environments and how the user community can help standards to evolve

Design of Computing Systems: Cognitive considerations Michael James Smith,Gavriel Salvendy,Richard J. Koubek,1997 *Report CS-R* ,1984

Formal Description Techniques, IV Ken R. Parker,Gordon A. Rose,1992 Formality is becoming accepted as essential in the development of complex systems such as multi layer communications protocols and distributed systems Formality is mandatory for mathematical verification a procedure being imposed on safety critical system development Standard documents are also becoming increasingly

formalised in order to capture notions precisely and unambiguously This FORTE 91 proceedings volume has focussed on the standardised languages SDL Estelle and LOTOS while as with earlier conferences remaining open to other notations and techniques thus encouraging the continuous evolution of formal techniques This useful volume contains 29 submitted papers three invited papers four industry reports and four tool reports organised to correspond with the conference sessions

Mathematical Frameworks for Component Software Zhiming Liu, Jifeng He, 2006 The range of components technology is both wide and diverse but some common understanding is emerging through the ideas of model based development These include the notions of interfaces contracts services connectors and architectures Key issues in the application of the technology are becoming clearer including the consistent integration of different views of a component component composition component coordination and transformation for platforms However we still know little about theories that support analysis and synthesis of component based systems The distinct feature of this volume is its focus on mathematical models that identify the core concepts as first class modeling elements and its providing of techniques for integrating and relating them The volume contains eleven chapters by well established researchers writing from different perspectives Each chapter gives explicit definitions of components in terms of a set of key aspects and addresses some of the problems of integration and analysis of various views component specification component composition component coordination refinement and substitution and techniques for solving problems The concepts and techniques are motivated and explained with the help of examples and case studies

Automating Runtime Optimizations for Parallel Object-oriented Programming Sanjeev Krishnan, University of Illinois at Urbana-Champaign. Department of Computer Science, 1996 Abstract Software development for parallel computers has been recognized as one of the bottlenecks preventing their widespread use In this thesis we examine two complementary approaches for addressing the challenges of high performance and enhanced programmability in parallel programs automated optimizations and object orientation We have developed the parallel object oriented language Charm an extension of C which enables the benefits of object orientation to be applied to the problems of parallel programming In order to improve parallel program performance without extra effort we explore the use of automated optimizations In particular we have developed techniques for automating run time optimizations for parallel object oriented languages These techniques have been embodied in the Paradise post mortem analysis tool which automates several run time optimizations without programmer intervention Paradise builds a program representation from traces analyzes characteristics chooses and parameterizes optimizations and generates hints to the Charm run time libraries The optimizations researched are for static and dynamic object placement scheduling granularity control and communication reduction We also evaluate Charm Paradise and several run time optimization techniques using real applications including an N body simulation program a program from the NAS benchmark suite and several other programs
