

WHAT IS **UNCERTAINTY**?

Uncertainty refers to the lack of certainty or precise knowledge about a future event or situation.

It is the feeling of not knowing what will happen and how things will unfold.

Uncertainty can arise for various reasons, such as a lack of information, the complexity of a situation, or the unpredictability of outcomes.

In everyday life, uncertainty can generate anxiety and concern, as it implies the inability to predict with certainty what will happen. Facing uncertainty requires flexibility, adaptability, and the ability to make informed decisions in conditions of ambiguity.

Statistics I. Richard Savage,1968 **Statistics: Uncertainty and Behavior** I. Richard Savage,1968 **Managing and Mining Uncertain Data** Charu C. Aggarwal,2010-07-08

Managing and Mining Uncertain Data a survey with chapters by a variety of well known researchers in the data mining field presents the most recent models algorithms and applications in the uncertain data mining field in a structured and concise way This book is organized to make it more accessible to applications driven practitioners for solving real problems Also given the lack of structurally organized information on this topic Managing and Mining Uncertain Data provides insights which are not easily accessible elsewhere Managing and Mining Uncertain Data is designed for a professional audience composed of researchers and practitioners in industry This book is also suitable as a reference book for advanced level students in computer science and engineering as well as the ACM IEEE SIAM INFORMS and AAAI Society groups

Data Clustering Charu C. Aggarwal,Chandan K. Reddy,2018-09-03

Research on the problem of clustering tends to be fragmented across the pattern recognition database data mining and machine learning communities Addressing this problem in a unified way Data Clustering Algorithms and Applications provides complete coverage of the entire area of clustering from basic methods to more refined and complex data clustering approaches It pays special attention to recent issues in graphs social networks and other domains The book focuses on three primary aspects of data clustering Methods describing key techniques commonly used for clustering such as feature selection agglomerative clustering partitional clustering density based clustering probabilistic clustering grid based clustering spectral clustering and nonnegative matrix factorization Domains covering methods used for different domains of data such as categorical data text data multimedia data graph data biological data stream data uncertain data time series clustering high dimensional clustering and big data Variations and Insights discussing important variations of the clustering process such as semisupervised clustering interactive clustering multiview clustering cluster ensembles and cluster validation In this book top researchers from around the world explore the characteristics of clustering problems in a variety of application areas They also explain how to glean detailed insight from the clustering process including how to verify the quality of the underlying clusters through supervision human intervention or the automated generation of alternative clusters

Comparing and Aligning Process Representations Han van der Aa,2018-06-26 This doctoral thesis focuses on the spread of process information in organizations and in particular on the mitigation of the problems caused by the spread of information on a single process over numerous models documents and systems Processes within organizations can be highly complex chains of inter related steps involving numerous stakeholders and information systems Due to this complexity having access to the right information is vital to the proper execution and effective management of an organization s business processes The main contributions of this thesis are five techniques that focus on the alignment and comparison of process information from different informational artifacts Each of these techniques tackles a specific scenario involving multiple

informational artifacts that contain process information in different representation formats
