**Testing Research Hypotheses Using Multiple Linear Regression** Keith A. McNeil, Francis J. Kelly, Judy T. McNeil, 1975 Multiple regression is becoming more widely used as the statistical technique for answering research hypotheses. This is so for several reasons: 1) the technique is extremely versatile; 2) the computer has made the technique more available to researchers; and 3) texts such as the authors' earlier work are making the technique more available to researchers. The statistical technique of multiple regression allows the inclusion of numerous continuous quantitative and categorical qualitative variables in the prediction of some criterion. Appendixes contain a multiple regression computer program and data on which the problems are based; a discussion of the similarities and differences between analysis of variance and multiple regression; and a computer program providing the regression solution to natural language research hypotheses. *Testing Research Hypotheses with the General Linear Model* Keith A. McNeil, Isadore Newman, Francis J. Kelly, 1996 Briefly describes 777 serial bibliographies relating to modern literature in most of the major languages. Chapters cover comprehensive bibliographies for English and foreign literatures for topics from African American studies to women's studies and for particular authors. The 1982 edition has been updated and expanded to include information on electronic serial bibliographies. Paper edition, unsewn. 1975. While speculation on the ways in which young children grow tends to be in terms of generalities, this volume emphasizes the role of empirical data in such discourse and attempts to relate observations to an antecedent set of quantitative findings. At a more particular level, the investigation considers six aspects of development: motor, intellectual, language, somatic, social, and physical development.
