Crockett,Institute for Computer Applications in Science and Engineering,1994 Abstract Applications which run on parallel supercomputers are often characterized by massive datasets Converting these vast collections of numbers to visual form has proven to be a powerful aid to comprehension For a variety of reasons it may be desirable to provide this visual feedback at runtime One way to accomplish this is to exploit the available parallelism to perform graphics operations in place In order to do this we

need appropriate parallel rendering algorithms and library interfaces This paper provides a tutorial introduction to some of the issues which arise in designing parallel graphics libraries and their underlying rendering algorithms The focus is on polygon rendering for distributed memory message passing systems We illustrate our discussion with examples from PGL a parallel graphics library which has been developed on the Intel family of parallel systems **IBM Systems Journal** International Business Machines Corporation,1995 Conference Proceedings ,1990 **Proceedings** ,1996 *Supercomputer Research in Chemistry and Chemical Engineering* Klavs F.
