## **Small Scale Processing Storage Of Trop:**

Smallscale Processing And Storage Of Tropical Root Crops Donald Plucknett,2019-07-11 Tropical root crops basic staples for millions of people are highly perishable and tremendous losses occur after harvest because of the lack of storage and processing technology This book is the first to fully describe small scale processing and storage methods for these root crops particularly taro sweet potato and yams The authors emphasize methods of handling and preserving the crops that require little in the way of energy or technology and they discuss traditional methods of storage and processing in Africa Asia and the Pacific They also describe small machines suitable for processing and highlight examples of higher level technology The book is a milestone in the search for ways to appropriately modernize traditional agriculture and food systems *Sweet Potato Products* John C. Bouwkamp,2018-01-18 It has been the goal in this volume to summarize the current level of understanding in a number of areas relating to sweet potato production and utilization To accomplish this a group of authors each with broad experience in the selected areas was assembled It is hoped that this volume will be useful as a beginning point a foundation for further research efforts **Handbook of Tropical Foods** Harvey T. Chan,1983 *Cassava in Food, Feed and Industry* C. Balagopalan,2018-01-18 Cassava *Manihot esculenta* Crantz is the staple food of more than 300 million people in the world Though cassava is utilized in a variety of ways scientific books of any category written on the postharvest aspects of cassava are relatively few The effect of this paucity was strikingly felt during recent years This was one of the impelling reasons behind the present venture which it is hoped will stimulate other publications on this neglected crop

**Taro, a Review of Colocasia Esculenta and Its Potentials** Jaw-Kai Wang, Sally Higa, 1983 Taro is a generally neglected crop that is an important staple in tropical countries It is safe to estimate that 400 million people use taro in their diets The importance of a comprehensive research and development program for taro should be viewed in light of a recent National Academy of Science study that points to two important facts One is that the United States must join the hungry nations to develop an agriculture that can feed the world or face food problems at home This is because food production in the United States is faltering yields are no longer increasing and increased energy inputs are starting to show diminishing returns Another point made by the study is that over the next twenty five years the new breadbaskets will be the developing countries They are the ones with the greatest capacity to increase food production A corollary to this is that neglected crops like taro have a potential that has not yet been fulfilled

**Third Regional Workshop on Tropical Fruits**, *Small-scale Processing of Fish*, 1982 This memorandum covers in detail technologies that are suitable for the small scale processing of fish that is drying salting smoking boiling and fermenting Thermal processing is described only briefly as it is used mainly in large scale production Enough information is given about the technologies to meet most of the needs of small scale processors Two chapters of interest to public planners compare from a socio economic viewpoint the various technologies described in the memorandum and analyse their impact on the environment
