Trustworthy Systems Through Quantitative Software Engineering Lawrence Bernstein, C. M. Yuhas, 2005-09-19 A benchmark text on software development and quantitative software engineering We all trust software All too frequently this trust is misplaced Larry Bernstein has created and applied quantitative techniques to develop trustworthy software systems He and C M Yuhas have organized this quantitative experience into a book of great value to make software trustworthy for all of us Barry Boehm *Trustworthy Systems Through Quantitative Software Engineering* proposes a novel reliability driven software engineering approach and discusses human factors in software engineering and how these affect team dynamics This practical approach gives software engineering students and professionals a solid foundation in problem analysis allowing them to meet customers changing needs by tailoring their projects to meet specific challenges and complete projects on schedule and within budget Specifically it helps developers identify customer requirements develop software designs manage a software development team and evaluate software products to customer specifications Students learn magic numbers of software engineering rules of thumb that show how to simplify architecture design and implementation Case histories and exercises clearly present successful software engineers experiences and illustrate potential problems results and trade offs Also featuring an accompanying Web site with additional and related material *Trustworthy Systems Through Quantitative Software Engineering* is a hands on project oriented resource for upper level software and computer science students engineers professional developers managers and professionals involved in software engineering projects An Instructor s Manual presenting detailed solutions to all the problems in the book is available from the Wiley editorial department An Instructor Support FTP site is also available

Perspectives on the Future of Software Engineering Jürgen Münch, Klaus Schmid, 2013-06-13 The dependence on quality software in all areas

of life is what makes software engineering a key discipline for today's society. Thus over the last few decades it has been increasingly recognized that it is particularly important to demonstrate the value of software engineering methods in real world environments a task which is the focus of empirical software engineering. One of the leading protagonists of this discipline worldwide is Prof. Dr. Dr. h. c. Dieter Rombach who dedicated his entire career to empirical software engineering. For his many important contributions to the field he has received numerous awards and recognitions including the U.S. National Science Foundation's Presidential Young Investigator Award and the Cross of the Order of Merit of the Federal Republic of Germany. He is a Fellow of both the ACM and the IEEE Computer Society. This book published in honor of his 60th birthday is dedicated to Dieter Rombach and his contributions to software engineering in general as well as to empirical software engineering in particular. This book presents invited contributions from a number of the most internationally renowned software engineering researchers like Victor Basili, Barry Boehm, Manfred Broy, Carlo Ghezzi, Michael Jackson, Leon Osterweil and of course by Dieter Rombach himself. Several key experts from the Fraunhofer IESE, the institute founded and led by Dieter Rombach, also contributed to the book. The contributions summarize some of the most important trends in software engineering today and outline a vision for the future of the field. The book is structured into three main parts. The first part focuses on the classical foundations of software engineering such as notations, architecture and processes, while the second addresses empirical software engineering in particular as the core field of Dieter Rombach's contributions. Finally, the third part discusses a broad vision for the future of software engineering.

Enterprise Interoperability VI Kai Mertins, Frédéric Bénében, Raúl Poler, Jean-Paul Bourrières, 2014-02-19. In 2007 INTEROP V Lab defined Enterprise Interoperability as the ability of an enterprise system or application to interact with others at a low cost with a flexible approach. Enterprise Interoperability VI brings together a peer reviewed selection of over 40 papers ranging from academic research through case studies to industrial and administrative experience of interoperability. It shows how in a scenario of globalised markets the capacity to cooperate with other firms efficiently becomes essential in order to remain in the market in an economically, socially and environmentally cost effective manner and that the most innovative enterprises are beginning to redesign their business model to become interoperable. This goal of interoperability is vital not only from the perspective of the individual enterprise but also in the new business structures that are now emerging such as supply chains, virtual enterprises, interconnected organisations or extended enterprises as well as in mergers and acquisitions. Establishing efficient and relevant collaborative situations requires managing interoperability.

from a dynamic perspective a relevant and efficient collaboration of organizations might require adaptation to remain in line with potentially changing objectives evolving resources and unexpected events for example Many of the papers contained in this the seventh volume of Proceedings of the I ESA Conferences have examples and illustrations calculated to deepen understanding and generate new ideas The I ESA 14 Conference is jointly organised by Ecole des Mines Albi Carmaux on behalf of PGSO and the European Virtual Laboratory for Enterprise Interoperability INTEROP VLab and supported by the International Federation for Information Processing IFIP A concise reference to the state of the art in systems interoperability Enterprise Interoperability VI will be of great value to engineers and computer scientists working in manufacturing and other process industries and to software engineers and electronic and manufacturing engineers working in the academic environment
