

Transfer Pricing Problem – Step-by-Step Solution & Exam Guide

Step 1: Understand the Question

We have Tech Friendly Computer with 3 divisions in China, South Korea, and the U.S. Each division operates as a profit center. We need to calculate after-tax operating income per unit for each division under 3 transfer pricing methods: (a) Market price, (b) 200% of full cost, (c) 350% of variable cost. Finally, determine which method maximizes after-tax operating income for the entire company.

Step 2: Key Data & Conversion

Exchange rates: 9 Yuan = \$1, 1000 Won = \$1 Retail price in U.S.: \$3,800

Division Costs: - China: Variable = ¥900, Fixed = ¥1,980 → In USD: Var = \$100, Fixed = \$220 -

South Korea: Variable = ■3,50,000, Fixed = ■4,70,000 → In USD: Var = \$350, Fixed = \$470 - U.S.:
Variable = \$125, Fixed = \$325

Market prices for transfer pricing: China to SK = ¥4,500 (\$500), SK to U.S. = ■13,40,000 (\$1,340)

Transfer Pricing Problem:

The Transfer Pricing Problem Robert G. Eccles, 1985 Author explores the transfer pricing policies On the beginning he identifies the elements of administrative process that are crucial for managing the transfer pricing in corporate practice Furthermore he examines the management challenges of the most common transfer pricing policies Finally he presents general framework for strategy implementation that is designed to help managers to analyse their own company transfer pricing practices An Analysis of the Transfer Pricing Problem Albert Frakes, 1964 The Transfer Pricing Problem James R. Hines, 1990 Section 1 introduces the material Section 2 of this paper describes the transfer pricing problem and some solutions that have been proposed in the past Section 3 offers a different solution and demonstrates that it supports an efficient allocation of resources Section 4 briefly discusses some of the complications that arise in practice analyzes methods governments have employed to address this problem and argues that the solution corresponds to concepts of income division that governments have tried to employ in broader contexts The Transfer Pricing Problem James R. Global Tax Fairness Thomas Pogge,Krishen Mehta,2016-02-04 This book addresses sixteen different reform proposals that are urgently needed to correct the fault lines in the international tax system as it exists today and which deprive both developing and developed countries of critical tax resources It offers clear and concrete ideas on how the reforms can be achieved and why they are important for a more just and equitable global system to prevail The key to reducing the tax gap and consequent human rights deficit in poor countries is global financial transparency Such transparency is essential to curbing illicit financial flows that drain less developed countries of capital and tax revenues and are an impediment to sustainable development A major break through for financial transparency is now within reach The policy reforms outlined in this book not only advance tax justice but also protect human rights by curtailing illegal activity and making available more resources for development While the reforms are realistic they require both political and an informed and engaged civil society that can put pressure on governments and policy makers to act

Addressing the Transfer-pricing Problem in an Origin-basis X Tax David F. Bradford,2003 In a previous paper I described how the tax design called the X Tax would facilitate an international tax system free of many of the complexities and avoidance opportunities plaguing the existing international tax regime and also have neutrality properties generally deemed desirable A choice must however be made between two basic treatments of transborder business transactions the origin and destination principles The destination principle approach sidesteps the need to identify arm s length terms of transborder transactions between related business entities the transfer pricing problem This serious problem remains in the origin principle approach which however presents fewer challenges of monitoring the flow of goods and services across borders obviates what I call the tourism problem whereby people can reduce their taxes by consuming in a low tax jurisdiction and arguably most important avoids transition effects associated with introduction of the tax and subsequent tax rate changes that occur in the destination approach In this paper I explore possible special rules for transborder transactions between related parties in an origin based system to eliminate the transfer pricing problem
