**Bipolar fuzzy hypersoft set and its application in decision making** Ashraf Al-Quran, Faisal Al-Sharqi, Kifayat Ullah, Mamika Ujianita, Romdhini, Marwa Balti, Mohammed Alomair, 2023-01-01

Smarandache developed the idea of hypersoft set (HSS) theory as an extension of soft set (SS) theory. HSS provides a general mathematical framework for handling data that can be formulated as several trait-valued disjoint sets which blend to various traits. The major goal of this article is to lay the footing for supplying a new model called bipolar fuzzy hypersoft sets (BFHSSs) by linking both fuzzy sets (FSs) and HSSs under bipolarity property. By using positive and negative membership functions and multi-argument functions, these structures work best for testing uncertainty. This makes them better at solving real-world problems, especially ones that have both good and bad sides. This paper also has different operations for BFHSSs such as absolute BFHSS, null BFHSS, complement, subset, union, intersection, and their related properties. Moreover, operations like OR and AND for BFHSS have been instituted. Some properties are demonstrated, and some numerical examples are given to illustrate the mechanism of using these tools. Finally, these tools are applied in the decision-making process based on an algorithm that is built.

*An Application of Neutrosophic Sets to*

*Decision Making* Michael Gr. Voskoglou, 2023-01-01 Frequently in real life situations decision making takes place under fuzzy conditions because the corresponding goals and or the existing constraints are not clearly defined Maji et al introduced in 2002 a method of parametric decision making using soft sets as tools and representing their tabular form as a binary matrix As we explain here however in cases where some or all of the parameters used for the characterization of the elements of the universal set are of fuzzy texture their method does not give always the best decision making solution In order to tackle this problem we modified in earlier works the method of Maji et al by replacing the binary elements in the tabular form of the corresponding soft set either by grey numbers or by triangular fuzzy numbers In this work in order to tackle more efficiently cases in which the decision maker has doubts even about the correctness of the fuzzy qualitative characterizations assigned to some or all of the elements of the universal set we replace the binary elements of the tabular form by neutrosophic triplets Our new neutrosophic decision making method is illustrated by an application concerning the choice of a new player by a soccer club

**An Approach toward a Q-Neutrosophic Soft Set and Its Application in Decision Making** Majdoleen Abu Qamar, Nasruddin Hassan, A neutrosophic set was proposed as an approach to study neutral uncertain information It is characterized through three memberships T I and F such that these independent functions stand for the truth indeterminate and false membership degrees of an object The neutrosophic set presents a symmetric form since truth enrolment T is symmetric to its opposite false enrolment F with respect to indeterminacy enrolment I that acts as an axis of symmetry
