## **Soft Computing In Information Retrieval:**

*Soft Computing in Information Retrieval* Fabio Crestani, Gabriella Pasi, 2000-05-26 Information retrieval IR aims at defining systems able to provide a fast and effective content based access to a large amount of stored information The aim of an IR system is to estimate the relevance of documents to users information needs expressed by means of a query This is a very difficult and complex task since it is pervaded with imprecision and uncertainty Most of the existing IR systems offer a very simple model of IR which privileges efficiency at the expense of effectiveness A promising direction to increase the effectiveness of IR is to model the concept of partially intrinsic in the IR process and to make the systems adaptive i e able to learn the user s concept of relevance To this aim the application of soft computing techniques can be of help to obtain greater flexibility in IR systems

Fuzzy Information Retrieval Donald H. Kraft, Erin Colvin, 2017-01-23 Information retrieval used to mean looking through thousands of strings of texts to find words or symbols that matched a user s query Today there are many models that help index and search more effectively so retrieval takes a lot less time Information retrieval IR is often seen as a subfield of computer science and shares some modeling applications storage applications and techniques as do other disciplines like artificial intelligence database management and parallel computing This book introduces the topic of IR and how it differs from other computer science disciplines A discussion of the history of modern IR is briefly presented and the notation of IR as used in this book is defined The complex notation of relevance is discussed Some applications of IR is noted as well since IR has many practical uses today Using information retrieval with fuzzy logic to search for software terms can help find software components and ultimately help increase the reuse of software This is just one practical application of IR that is covered in this book Some of the classical models of IR is presented as a contrast to extending the Boolean model This includes a brief mention of the source of weights for the various models In a typical retrieval environment answers are either yes or no i e on or off On the other hand fuzzy logic can bring in a degree of match vs a crisp i e strict match This too is looked at and explored in much detail showing how it can be applied to information retrieval Fuzzy logic is often times considered a soft computing application and this book explores how IR with fuzzy logic and its membership functions as weights can help indexing querying and matching Since fuzzy set theory and logic is explored in IR systems the explanation of where the fuzz is ensues The concept of relevance feedback including pseudorelevance feedback is explored for the various models of IR For the extended Boolean model the use of genetic algorithms for relevance feedback is delved into The concept of query expansion is explored using rough set theory Various term relationships is modeled and presented and the model extended for fuzzy retrieval An example using the UMLS terms is also presented The model is also extended for term relationships beyond synonyms Finally this book looks at clustering both crisp and fuzzy to see how that can improve retrieval performance An example is presented to illustrate the concepts

**Computing Techniques** Bhatnagar Pragati,2015-07-27 The book entitled Efficient Information Retrieval Using Soft Computing Techniques explores the use of Soft Computing technique for designing efficient retrieval system In past few decades information collection and storage efforts have become easier but efforts required to retrieve relevant information have become significantly cumbersome especially in textual databases Thus designing an efficient Information retrieval system is challenging task and an important area of research Only users with extensive subject area knowledge and systems knowledge are capable to manoeuvre and explore from these databases In spite of the work done in the field of Information Retrieval there is a large scope in this field in order to improve the efficiency of an IRS Naturally research on information models that can effectively rank search results according to document relevance has become a fundamental subject of interest Thus the Book targets an important area of research *Soft Computing Applications to Intelligent Information Retrieval on the Internet* O.
