

# What is **Solidification**?

**Solidification** is the process by which a substance changes from a liquid or gas state to a solid state as it loses heat.

During this phase transition, particles lose kinetic energy, arranging themselves into a more ordered and rigid structure.

Commonly observed in freezing or crystallization, solidification plays a fundamental role in material science, manufacturing, and geophysics.

Understanding the **solidification** process is crucial for controlling the properties of materials, from metals to polymers, and for studying natural phenomena like the formation of ice in freezing water.
