BrewingScience Yearbook 2023 Fachverlag Hans Carl GmbH,2024-02-29 This publication is a compilation of the articles published in the BrewingScience bimonthly online journal in 2023. Aside from the more conventional subjects of barley malt and hops as well as of wort and beer quality, some novel areas of research emerged this year, including the implementation of artificial intelligence and machine learning in the process of kilning hops, the substitution of malt with residual ingredients from the baking industry, the impact of fermentation conditions on ethanol production using exotic fruits and much more.

Sweet, Reinforced and Fortified Wines Fabio Mencarelli, Pietro Tonutti, 2013-04-16. Wines from Grape Dehydration is the first of its kind in the field of grape dehydration, the controlled drying process which produces a special group of wines. These types of wine are the most ancient made in the Mediterranean basin and are even described in Herodotus. Until few years ago, it was thought that these wines, such as Pedro Ximenez, Tokai Passito, and Vin Santo, were the result of simple grape drying because the grapes were left in the sun or inside greenhouses that had no controls over temperature, relative humidity, or ventilation. But Amarone wine, one of the most prized wines in the world, is the first wine in which the drying is a controlled process. This controlled process of grape dehydration changes the grape at the biochemical level and involves specialist vine management, postharvest technology, and production processes which are different from the typical wine-making procedure. After a history of grape dehydration, the book is then divided into two sections: scientific and technical. The scientific section approaches the subjects of vineyard management and dehydration technology and how they affect the biochemistry and the quality compounds of grape, as well as vinification practices to preserve primary volatile compounds and colour of grape. The technical section is devoted to four main classes of wine: Amarone, Passito, Pedro Ximenez, and Tokai. The book then covers sweet wines not made by grape dehydration and the analytical sensorial characteristics of the wines. A concluding final chapter addresses the market for these special wines. This book is intended for wineries and wine makers, wine operators, postharvest specialists, vineyard managers, growers, enology wine students, agriculture viticulture faculties, and course leaders and food processing scientists.

Alcoholic Beverages John Piggott, 2011-11-24. Sensory evaluation methods are extensively used in the wine, beer, and distilled spirits industries for product development and quality control, while consumer research methods also offer useful insights as the product is being developed. This book introduces sensory evaluation and consumer research methods and provides a detailed analysis of their applications to a variety of different alcoholic beverages. Chapters in part one look at the principles of sensory evaluation and how these can be applied to alcoholic beverages, covering topics such as shelf life evaluation and gas chromatography/olfactometry. Part two concentrates on fermented beverages such as beer and wine, while distilled products including brandies, whiskies, and many others are discussed in part three. Finally, part four examines how consumer research methods can be employed in product development in the alcoholic beverage industry. With its distinguished editor and international team of contributors, Alcoholic Beverages is an invaluable

reference for those in the brewing winemaking and distilling industries responsible for product development and quality control as well as for consultants in sensory and consumer science and academic researchers in the field. Comprehensively analyses the application of sensory evaluation and consumer research methods in the alcoholic beverage industry. Considers shelf life evaluation, product development and gas chromatography. Chapters examine beer, wine and distilled products and the application of consumer research in their production. 5G and Beyond Parag Chatterjee, Robin Singh

MOSFET Models for SPICE Simulation William Liu, 2001-02-21 An expert guide to understanding and making optimum use of BSIM. Used by more chip designers worldwide than any other comparable model, the Berkeley Short Channel IGFET Model BSIM has over the past few years established itself as the de facto standard MOSFET SPICE model for circuit simulation and CMOS technology development. Yet until now there have been no independent expert guides or tutorials to supplement the various BSIM manuals currently available. Written by a noted expert in the field, this book fills that gap in the literature by providing a comprehensive guide to understanding and making optimal use of BSIM3 and BSIM4. Drawing upon his extensive experience designing with BSIM, William Liu provides a brief history of the model, discusses the various advantages of BSIM over other models and explores the reasons why BSIM3 has been adopted by the majority of circuit manufacturers. He then provides engineers with the detailed practical information and guidance they need to master all of BSIM's features. He summarizes key BSIM3 components, represents the BSIM3 model with equivalent circuits for various operating conditions, provides a comprehensive glossary of modeling terminology, lists alphabetically BSIM3 parameters along with their meanings and relevant equations, explores BSIM3's flaws and provides improvement suggestions, describes all of BSIM4's improvements and new features, and provides useful SPICE files which are available online at the Wiley ftp site.
