Truthlikeness For Multidimensional Quantitative Cognitive Problems:

Truthlikeness for Multidimensional, Quantitative Cognitive Problems I.A. Kieseppä, 2013-03-09 Philosophers of science have produced a variety of definitions for the notion of one sentence theory or hypothesis being closer to the truth more verisimilar or more truthlike than another one The definitions put forward by philosophers presuppose at least implicitly that the subject matter with which the compared sentences theories or hypotheses are concerned has been specified and the property of closeness to the truth verisimilitude or truth likeness appearing in such definitions should be understood as closeness to informative truth about that subject matter This monograph is concerned with a special case of the problem of defining verisimilitude a case in which this subject matter is of a rather restricted kind Below I shall suppose that there is a finite number of interrelated quantities which are used for characterizing the state of some system Scientists might arrive at different hypotheses concerning the values of such quantities in a variety of ways There might be various theories that give different predictions whose informativeness might differ too on which combinations of the values of these quantities are possible Scientists might also have measured all or some of the quantities in question with some accuracy Finally they might also have combined these two methods of forming hypotheses on their values by first measuring some of the quantities and then deducing the values of some others from the combination of a theory and the measurement results Philosophy and Logic In Search of the Polish Tradition Jaakko Hintikka, Tadeusz Czarnecki, K. Kijania-Placek, Tomasz Placek, Artur Rojszczak, 2013-06-29 On the occasion of his sixtieth birthday we dedicate this volume to Jan Wołerski our teacher our colleague our friend Both of us are particularly indebted to Jan not only with regards to professional matters but some private ones as well Hence we hope that he forgives us an occasional lapse into fondness and affection That said may the list of his personal merits remain shrouded in mystery rather than unveil them we open here by appraising Jan's presence from a broader perspective To note that Jan was not always a part of our lives would not evoke surprise However to imagine the Institute of Philosophy on Grodzka Street or Krakow philosophy without him in it would be a harder task at least for us Nonetheless we do remember the days when he was commuting to Krakow as a guest lecturer Is there anything about those days which particularly comes to mind To shed light on the story which follows one must begin by stating that the early 1980s when we were studying philosophy was not a bright period The great masters of Krakow philosophy Ingarden Mehlberg Zawirski or Dąbrowska were either dead or for political reasons kept silent The years following Martial Law 1981-1983 were intellectually very blighted and barren In the midst of all this we were attending Jan's course on general methodology **Refined Verisimilitude** S.D. Zwart, 2013-11-11 The subject of the present inquiry is the approach to the truth research which started with the publication of Sir Karl Popper's *Conjectures and Refutations* In the decade before this publication Popper fiercely attacked the ideas of Rudolf Carnap about confirmation and induction and ten years later in the famous tenth chapter of *Conjectures* he introduced his own ideas about scientific progress and verisimilitude of the quotation

on page 6 Abhorring inductivism for its appreciation of logical weakness rather than strength Popper tried to show that fallibilism could serve the purpose of approach to the truth To substantiate this idea he formalized the common sense intuition about preferences that is B is to be preferred to A if B has more advantages and fewer drawbacks than A In 1974 however David Miller and Pavel Tichy proved that Popper's formal explication could not be used to compare false theories Subsequently many researchers proposed alternatives or tried to improve Popper's original definition Confirmation, Empirical Progress, and Truth Approximation Roberto Festa, Atocha Aliseda, Adriana Johanna Maria Peijnenburg, 2005 This book is the first of two volumes devoted to the work of Theo Kuipers a leading Dutch philosopher of science Philosophers and scientists from all over the world thirty seven in all comment on Kuipers philosophy and each of their commentaries is followed by a reply from Kuipers The present volume focuses on Kuipers views on confirmation empirical progress and truth approximation as laid down in his *From Instrumentalism to Constructive Realism* Kluwer 2000 In this book Kuipers offered a synthesis of Carnap's and Hempel's confirmation theory on the one hand and Popper's theory of truth approximation on the other The key element of this synthesis is a sophisticated methodology which enables the evaluation of theories in terms of their problems and successes even if the theories are already falsified and which also fits well with the claim that one theory is closer to the truth than another Ilkka Niiniluoto Patrick Maher John Welch Gerhard Schurz Igor Douven Bert Hamminga David Miller Johan van Benthem Sjoerd Zwart Thomas Mormann Jes's Zamora Bonilla Isabella Burger Johannes Heidema Joke Meheus Hans Mooij and Diderik Batens comment on these ideas of Kuipers and many present their own account The present book also contains a synopsis of *From Instrumentalism to Constructive Realism* It can be read independently of the second volume of *Essays in Debate with Theo Kuipers* which is devoted to Kuipers *Structures in Science* 2001
