

Inhalation of Mtb

- Phagocytosis of bacilli

Inflammatory cell recruitment

- AM secreted IL-12 and IL-18
- IFN- γ induce bacterial killing
- TNF- α is essential in the control of Mtb growth and granuloma formation

Control of mycobacteria growth

- Stops Mtb proliferation
- Chronic cytokine stimulation
- Granuloma is formed by several cells recruited to the lung. Inside, infected macrophages contain the Mtb preventing their spread.

Postprimary tuberculosis

- Mycobacteria persistence is associated to a failure in the immune-surveillance
- Disease may reactivate
- Damage of nearby bronchi
- Spreading of the Mtb to other areas of the lung

Microbe Hunters, Then and Now Hilary Koprowski, Michael B. A. Oldstone, 1996 Built upon the foundation of Paul de Kruif's *Microbe Hunters* written in 1926 but differing in that the conquest unfolds through essays by today's scientists this book not only relates the history but also conveys the excitement felt by the individual researchers themselves These dramatic stories describing major accomplishments and future challenges in medical science serve as a beacon to guide new recruits into the battle for control of microbial diseases and provide personal models for graduate and postdoctoral students currently in biomedical research There are some fine ingredients here and it is good to have them together in a single volume embracing past achievements and current and emerging problems in the control of infectious diseases Especially enjoyed Thomas Weller's account complete with pages of laboratory notebook of his isolation of the agents of varicella and zoster Bernard Dixon *British Medical Journal* The authors all distinguished and well known scientists recognize the difficult challenges that lie ahead but in general hold an optimistic view of the outcome of future research *Microbe Hunters then and now* is both interesting and enjoyable to read a timely sequel to de Kruif's original book and a solid historical document written by the microbe hunters themselves Abner L. Bacterial Infection: Close Encounters at the Host Pathogen Interface Peter K. Vogt, Michael J. Mahan, 1997-10-09

When it comes to bacterial disease we are living in a state of false security. Antibiotics have indeed brought unprecedented health benefits, protection from and cure of bacterial diseases during the past 50 years. But there are ominous signs that the fortress and the defenses built on antibiotics are crumbling. They are crumbling because we wittingly or unwittingly created selective conditions for the emergence of superior pathogens that can no longer be controlled by antibiotics. There are numerous warnings. After a long period of eclipse, tuberculosis has now emerged as a serious threat, unchecked by antibiotic treatment. Recent years have seen reports of cholera epidemics, anthrax infections, serious problems with Salmonella, and even with E. coli, just to name a few. Mankind is in a race with microbial invaders. The challenge is to anticipate and respond to developments that affect the precarious balance between man and microbe. This will require new knowledge, and it will take time for an effective application of that knowledge.
