*Visual Coding and Adaptability* C. S. Harris, 2014-08-15 First published in 1980 Routledge is an imprint of Taylor Francis an informa company

**The Adaptive Brain II** Stephen Grossberg, 2013-10-22 The Adaptive Brain II Vision Speech Language and Motor Control focuses on a unified theoretical analysis and predictions of important psychological and neurological data that illustrate the development of a true theory of mind and brain The publication first elaborates on the quantized geometry of visual space and neural dynamics of form perception Discussions focus on reflectance rivalry and spatial frequency detection figure ground separation by filling in barriers and disinhibitory propagation of functional scaling from boundaries to interiors The text then takes a look at neural dynamics of perceptual grouping and brightness perception Topics include simulation of a parametric binocular brightness study smoothly varying luminance contours versus steps of luminance change macrocircuit of processing stages paradoxical percepts as probes of adaptive processes and analysis of the Beck theory of textural segmentation The book examines the neural dynamics of speech and language coding and word recognition and recall including automatic activation and limited capacity attention a macrocircuit for the self organization of recognition and recall role of intra list restructuring and contextual associations and temporal order information across item representations The manuscript is a vital source of data for scientists and researchers interested in the development of a true theory of mind and brain

**Sensory Experience, Adaptation, and Perception** Lothar Spillman, Bill R. Wooten, 2013-05-13 Published in 1983 Sensory Experience Adaptation and Perception is a valuable contribution to the field of Cognitive Psychology

**Adaptive Spatial Alignment** Gordon M. Redding, Benjamin Wallace, 2013-06-17 For most people prism adaptation is an amusing demonstration first experienced perhaps in an introductory psychology course This monograph relates this peculiar phenomenon to the larger context of cognitive science especially motor control and learning The first part sketches the background concepts necessary to understand the contribution of prism adaptation to the larger issue of adaptive perceptual motor performance including a review of the basic concepts of motor control and learning that enable strategic response in the prism adaptation situation the development of a hypothesis about spatial representation and spatial mapping and an introduction to the basic idea of adaptive spatial alignment and a contrasting view of perceptual and motor learning and a review of evidence for the involvement of nonassociative and associative learning in prism adaptation Directly concerned with data and theory in prism adaptation the second part presents an outline of prism adaptation methodology and a list of several empirical conclusions from previous research that constrained development of theoretical framework a theory of strategic perceptual motor control and learning which enables adaptive performance during prism exposure but does not directly involve adaptive spatial alignment an extension of the theory to include realignment processes which correct for the spatial misalignment among sensorimotor systems produced by prisms and a demonstration of how traditional issues in prism adaptation may be rephrased in terms of the present theoretical framework The last part of this

volume reviews the research conducted in developing and testing the present theory of prism adaptation It summarizes the initial investigations employing a naturalistic exposure setting reports some more rigorous tests with an experimentally constrained research paradigm points out the more general theoretical issues raised by the authors analysis of prism adaptation and makes specific suggestions for further research within the prism adaptation paradigm

**Psychology of Learning and Motivation**, 1993-12-07 With a long standing tradition for excellence this series is a collection of quality papers that are widely read by researchers in cognitive and experimental psychology Each chapter thoughtfully integrates the writings of leading contributors who present and discuss significant bodies of research relevant to their discipline

**Perception** R. Held, H.W. Leibowitz, H.L. Teubner, 2012-12-06 This volume was designed to focus on the problems of perception and originally was to have been solely edited by Professor Hans Lukas Teuber who was a member of the editorial board which initiated production of the Handbook Accordingly he issued invitations to a number of researchers asking them to contribute chapters written in a style described in his words I hope that no author will feel constrained to undertake a major search of the literature he could find in an area in which he has been quite active himself and here most of the issues are immediately obvious to him In this way the writing of the chapter should be enjoyable rather than a chore it should result in a personal account of the state of a given area rather than in an encyclopedic treatise the field deserves this sort of summary particularly if it is pointed toward the future and speeds the convergence of developments in sensory physiology and psychological studies of perception With the growing burden of national and international commitments including departmental headship Professor Teuber felt that it would be wise to share the editorial responsibilities for this volume and accordingly asked Professors Richard Held and Herschel Leibowitz to co edit the volume with him in the same spirit as outlined in his invitation to authors They agreed to help in this task

*How Vision Works* Nigel Daw, 2012-01-19 This book covers all aspects of the visual system from sensory aspects to eye movements attention and visual memory in a brief format Each chapter describes the psychology followed by where in the brain that aspect is dealt with the properties of the cells in that area and what happens if a patient has a lesion or stroke in that area

*The Adaptive Brain* Stephen Grossberg, 1987

**Sensation and Perception** Harvey Richard Schiffman, 1990-02-14 A revised and updated edition of the well received text on sensation and perception Features an integrated treatment of the main principles of sensation and perception within a bio behavioral context stressing specialized anatomy physiological mechanisms and functional behavior with adaptive consequences The main theories principles and basic findings of the psychophysiology of sensation and perception are given a balanced overview Contains many helpful pedagogical aids including chapter previews study questions key terms demonstrations and references
