Volume Graphics 2001 K. Mueller, A. Kaufman, 2012-12-06 This book contains the proceedings of the International Workshop on Volume Graphics 2001 VG O I which took place on June 21 and June 22 at Stony Brook New York This year's event was the second in the series following a successful premiere in Swansea Wales in March 1999 and was co sponsored by the IEEE Technical Committee on Visualization and Graphics TC VG as well as EUROGRAPHICS The Volume Graphics Workshop is held bi annually and has been created to provide a forum for the exploration and advancement of volume based techniques beyond the scope of just volume visualization It brings together researchers and practitioners both from academia and industry from many parts of the world Volume graphics is in the process of evolving into a general graphics technology and the papers included in these proceedings are testimonial to the wide spectrum of unique applications and solutions that volumetric representations are able to offer Real-Time Volume Graphics Klaus Engel, Markus Hadwiger, Joe Kniss, Christof Rezk-Salama, Daniel Weiskopf, 2006-07-21

Based on course notes of SIGGRAPH course teaching techniques for real time rendering of volumetric data and effects covers both applications in scientific visualization and real time rendering Starts with the basics texture based ray casting and then improves and expands the algorithms incrementally Book includes source code algorithms diagrams **IEEE/ACM SIGGRAPH Symposium on Volume Visualization and Graphics 2002**, 2002

Kaufman, Roni Yagel, 2012-12-06 Min Chen Arie E Kaufman and Roni Yage Volume graphics is concerned with graphics scenes defined in volume data types where a model is specified by a mass of points instead of a collection of surfaces The underlying mathematical definition of such a model is a set of scalar fields which define the geometrical and physical properties of every point in three dimensional space As true 3D representations volume data types possess more descriptive power than surface data types and are morphologically closer to many high level modelling schemes in traditional surface graphics such as parametric surfaces implicit surfaces and volume sweeping The past decade has witnessed significant advances in volume visualisation driven mainly by applications such as medical imaging and scientific computation The work in this field has produced a number of volume rendering methods that enable 3D information in a volumetric dataset to be selectively rendered into 2D images With modern computer hardware such a process can easily be performed on an ordinary workstation More importantly volume based rendering offers a consistent solution to the primary deficiencies of the traditional surface based rendering which include its inability to encapsulate the internal description of a model and the difficulties in rendering amorphous phenomena The emergence of volume based techniques has not only broadened the extent of graphics applications but also brought computer graphics closer to other scientific and engineering disciplines including image processing computer vision finite element analysis and rapid prototyping *Journal of Graphics Tools*, 1998
