International Primary Care Computing Glyn M. Hayes, Nicholas Robinson, 1991 Primary care or ambulatory care as it is sometimes called is a rapidly developing area of information technology Primary care workers both in developed and developing countries can greatly benefit from a comprehensive computer support system Currently most of the effort and investment in health care computing is made in hospital or secondary care As a result the needs of the primary care workers are often poorly understood or ignored in information technology research and development These proceedings in addition to discussing the aspects of computing which apply specifically to primary care provide an extensive bibliography of the subject which may form a valuable organizational basis for future study
