**Digital Video** Floriano De Rango, 2010-02-01 This book tries to address different aspects and issues related to video and multimedia distribution over the heterogeneous environment considering broadband satellite networks and general wireless systems where wireless communications and conditions can pose serious problems to the efficient and reliable delivery of content Specific chapters of the book relate to different research topics covering the architectural aspects of the most famous DVB standard DVB T DVB S S2 DVB H etc the protocol aspects and the transmission techniques making use of MIMO hierarchical modulation and lossy compression In addition research issues related to the application layer and to the content semantic organization and research on the web have also been addressed in order to give a complete view of the problems The network technologies used in the book are mainly broadband wireless and satellite networks The book can be read by

intermediate students researchers engineers or people with some knowledge or specialization in network topics      *Resource Management in Mobile Computing Environments* Constandinos X. Mavromoustakis, Evangelos Pallis, George Mastorakis, 2014-06-09 This book reports the latest advances on the design and development of mobile computing systems describing their applications in the context of modeling analysis and efficient resource management It explores the challenges on mobile computing and resource management paradigms including research efforts and approaches recently carried out in response to them to address future open ended issues The book includes 26 rigorously refereed chapters written by leading international researchers providing the readers with technical and scientific information about various aspects of mobile computing from basic concepts to advanced findings reporting the state of the art on resource management in such environments It is mainly intended as a reference guide for researchers and practitioners involved in the design development and applications of mobile computing systems seeking solutions to related issues It also represents a useful textbook for advanced undergraduate and graduate courses addressing special topics such as mobile and ad hoc wireless networks peer to peer systems for mobile computing novel resource management techniques in cognitive radio networks and power management in mobile computing systems      *Essential Issues in SOC Design* Youn-Long Steve Lin, 2007-05-31 This book originated from a workshop held at the DATE 2005 conference namely Designing Complex SOCs State of the art in issues related to System on Chip SoC design by leading experts in the fields covers IP development verification integration chip implementation testing and software SOC design is fast becoming the key area of focus that engineers and researchers from the Electronic Design Automation field are focusing on in their quest to further develop Integrated Circuit technology The more systems and even networks that we can integrate on one piece of silicon the faster cheaper more powerful and efficient the technology will become *Essential Issues in SOC Design* contains valuable academic and industrial examples for those involved with the design of complex SOCs all contributors are selected from a region of the world that is generally known to lead the SOC Revolution namely Asia      *Scalable Parallel Programming Applied to H.264/AVC Decoding* Ben Juurlink, Mauricio Alvarez-Mesa, Chi Ching Chi, Arnaldo Azevedo, Cor Meenderinck, Alex Ramirez, 2012-06-01 Existing software applications should be redesigned if programmers want to benefit from the performance offered by multi and many core architectures Performance scalability now depends on the possibility of finding and exploiting enough Thread Level Parallelism TLP in applications for using the increasing numbers of cores on a chip Video decoding is an example of an application domain with increasing computational requirements every new generation This is due on the one hand to the trend towards high quality video systems high definition and frame rate 3D displays etc that results in a continuous increase in the amount of data that has to be processed in real time On the other hand there is the requirement to maintain high compression efficiency which is only possible with video codes like H 264 AVC that use advanced coding techniques In this book the parallelization of H 264 AVC decoding is presented as a case study of parallel programming H 264 AVC decoding is

an example of a complex application with many levels of dependencies different kernels and irregular data structures The book presents a detailed methodology for parallelization of this type of applications It begins with a description of the algorithm an analysis of the data dependencies and an evaluation of the different parallelization strategies Then the design and implementation of a novel parallelization approach is presented that is scalable to many core architectures Experimental results on different parallel architectures are discussed in detail Finally an outlook is given on parallelization opportunities in the upcoming HEVC standard
