Structural Design For Physical Security:

Structural Design for Physical Security Task Committee on Structural Design for Physical Security, 2021 Prepared by the Task Committee on Structural Design for Physical Security of the Blast Shock and Impact Committee of the Dynamic Effects Technical Administration Committee of the Structural Engineering Institute of ASCE Structural Design for Physical Security MOP 142 provides an overview of the typical design considerations encountered in new construction and renovation of facilities for physical security tactics The constant change in threat tactics and types has led to the need for physical security designs that account for these new considerations and anticipate the environment of the future with flexibility and adaptability being priorities This Manual of Practice serves as a replacement for the 1999 technical report Structural Design for Physical Security State of the Practice and is intended to provide a roadmap for designers and engineers involved in physical security It contains references to other books standards and research Topics include Threat determination and available assessment and criteria documents Methods by which structural loadings are derived for the determined threats Function and selection of structural systems Design of structural components Function and selection of window and facade components Specific considerations for retrofitting structures Testing methodologies and Bridge and tunnel security This book will be a valuable resource to structural engineers and design professionals involved with projects that have physical security concerns related to explosive ballistic forced entry and hostile vehicle threats

Structural Design for Physical Security Task Committee on Structural Design for Physical Security, 1999-01-01 Prepared by the Task Committee on Structural Design for Physical Security of the Structural Engineering Institute of ASCE This report provides guidance to structural engineers in the design of civil structures to resist the effects of terrorist bombings As dramatized by the bombings of the World Trade Center in New York City and the Murrah Building in Oklahoma City civil engineers today need guidance on designing structures to resist hostile acts The U S military services and foreign embassy facilities developed requirements for their unique needs but these the documents are restricted Thus no widely available document exists to provide engineers with the technical data necessary to design civil structures for enhanced physical security The unrestricted government information included in this report is assembled collectively for the first time and rephrased for application to civilian facilities Topics include determination of the threat methods by which structural loadings are derived for the determined threat the behavior and selection of structural systems the design of structural components the design of security doors the design of utility openings and the retrofitting of existing structures This report transfers this technology to the civil sector and provides complete methods guidance and references for structural engineers challenged with a physical security problem

Structural Design for Physical Security Edward J. Conrath, Structural Engineering Institute, 1999-01-01 In recognition of this void the ASCE created a Task Committee to produce this State of the Practice Report which provides guidance to structural engineers in the design of civil structures to resist the effects of terrorist bombings This Report

includes unrestricted government information which is for the first time assembled collectively and rephrased for application to civilian facilities Eight chapters outline the steps commonly followed in this practice These are the determination of the threat methods by which structural loadings are derived for the determined threat the behavior and selection of structural systems the design of structural components the design of security doors the design of utility openings and the retrofitting of existing structures

Structural Design for Physical Security Task Committee on Structural Design for Physical Security, 2021-05-31 The first edition of this book was published in the aftermath of the bombing attacks on the World Trade Center in New York New York in 1993 and on the Alfred P Murrah Building in Oklahoma City Oklahoma in 1995 Preface

Protecting Buildings from Bomb Damage National Research Council, Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Committee on Feasibility of Applying Blast-Mitigating Technologies and Design Methodologies from Military Facilities to Civilian Buildings, 1995-10-26 This book provides a brief overview of worldwide terrorist activity and reviews technologies and methods for designing blast resistant buildings These techniques primarily developed by the military have applicability and relevance to the design of civilian structures The volume recommends that a program of applied research and technology transfer be undertaken to hasten the availability and utility of these techniques to the civilian building community
