Syntactic Carpentry An Emergentist Approach To Syntax:

Syntactic Carpentry William O'Grady,2005-03-23 Syntactic Carpentry An Emergentist Approach to Syntax presents a groundbreaking approach to the study of sentence formation Building on the emergentist thesis that the structure and use of language is shaped by more basic non linguistic forces rather than by an innate Universal Grammar William O Grady shows how the defining properties of various core syntactic phenomena phrase structure co reference control agreement contraction and extraction follow from the operation of a linear efficiency driven processor This in turn leads to a compelling new view of sentence formation that subsumes syntactic theory into the theory of sentence processing eliminating grammar in the traditional sense from the study of the language faculty With this text O Grady advances a growing body of literature on emergentist approaches to language and situates this work in a broader picture that also includes attention to key issues in the study of language acquisition psycholinguistics and agrammaticism This book constitutes essential reading for anyone interested in syntax and its place in the larger enterprise of cognitive science

A Computational Approach to the Syntax of Displacement and the Semantics of Scope Andrea Christina Unger,2010 This dissertation is about the syntax and semantics of non local dependencies It focuses on wh displacement and operator scope and addresses the challenge they pose to theoretical linguistics How are form and meaning related and to which extent do syntax and semantics operate in parallel A common approach of formal grammar theories is to assume that displacement and scope construal go hand in hand and consequently to impose a strict correspondence between syntax and semantics This approach is challenged however by a considerable amount of cases where the syntactic position of an operator expression does not coincide with its semantic scope position This dissertation therefore pursues the opposite approach It argues that syntactic displacement and semantic scope taking do not interact at

all The overall picture that is developed is that grammar consists of two parts a core system for establishing local dependencies with syntax and semantics operating in parallel and extensions to this core system for establishing non local dependencies with syntax and semantics operating independently In developing this picture it is shown that a substantial amount of data such as pronunciation in wh clusters order preservation with multiple displacement remnant movement and freezing as well as different scopal behavior can indeed be accounted for with a syntax and semantics that are largely independent from one another
