White Light Optical Signal Processing:

White-light Optical Signal Processing Francis T. S. Yu, 1985 This book provides a basic background in partially coherent or white light optical signal processing using a great deal of original research Includes information on the fundamental concepts the theoretical aspects of coherence requirement transfer function and noise performance of a white light optical signal processor under partial coherence regime Emphasizes state of the art applications *Signal Processing Techniques for Optical Fiber Sensors Using White Light Interferometry* Vikram Bhatia, 1993 *Optical Signal Processing*

Joseph Horner, 2012-12-02 Optical Signal Processing is a collection of synopses of the works of many experts in the different fields of optical signal processing The book also includes systems or algorithms that have been successfully tried and used The monograph is divided into seven parts Part I discusses color image processing and white light Fourier transformations while Part II covers topics related to pattern recognition such as optical feature extraction and unconventional correlators Part III deals with temporal signal processing and its related optical architectures acoustooptic synthetic aperture radar processors and acoustooptic signal processors Part IV tackles nonlinear optical processors and waveguide devices Part V discusses optical and tomographic transformation Part VI deals with optical numeric processing optical linear algebra processors and related algorithm and software Part VII talks about devices and components and their applications such as fiber optic delay line signal processors and spatial light modulators The text is recommended for engineers and scientists in the field of optical signal processing especially those who would like to know more of its advancements **Optical Signal**

Processing, Computing, and Neural Networks Frances T. S. Yu, Suganda Jutamulia, 1992-11-19 In recent years optical computing and optical neural networks research has enriched the field originally known as optical signal processing *Optical Signal Processing Computing and Neural Networks* is a self contained textbook that offers an introductory survey which examines photonics linear and nonlinear signal processing and numerical symbolic and neural computing This comprehensive sourcebook is a basic text for students who lack an intensive background in optic electromagnetic computer and neural network theories It will also serve as a working reference for optical physicists and engineers involved in current research and development of modern optical signal processing that includes optical computing and neural networks The first chapter of this book contains the basic coherent theory and concepts of optical transformation The second chapter introduces the fundamental concept of optical signal processing and its architectures The third chapter presents selected applications in coherent optics while the fourth chapter discusses white light processing and its applications The advances of spatial light modulators are discussed as well as hybrid optical architectures using spatial light modulators in later chapters Applications of photorefractive crystals in optical signal processing are presented in chapter 7 Digital optical computing is described in chapter 8 while optical neural networks and their architectures designs and models are thoroughly covered in chapter 9 Examples and experimental results are included throughout the book to emphasize the concepts Chapters include problem
