Reflections on Theoretical Issues in Argumentation Theory

Frans H. van Eemeren, Bart Garssen, 2015-08-08 This volume presents a selection of papers reflecting key theoretical issues in argumentation theory Its six sections are devoted to specific themes including the analysis and evaluation of argumentation argument schemes and the contextual embedding of argumentation The section on general perspectives on argumentation discusses the trends of empiricalization contextualization and formalization offers descriptions of the analytical and evaluative tools of informal logic and highlights selected principles that argumentation theorists do and do not agree upon In turn the section on linguistic approaches to argumentation focuses on the problem of distinguishing between explanation and argument while also elaborating on the role of verbal indicators of argument schemes All essays included in this volume point out notable recent developments in the study of argumentation

Fundamentals of Argumentation Theory

Frans H. van Eemeren, Rob Grootendorst, Ralph H. Johnson, Christian Plantin, Charles A. Willard, 2013-11-05 Argumentation theory is a distinctly multidisciplinary field of inquiry It draws its data assumptions and methods from disciplines as disparate as formal logic and discourse analysis linguistics and forensic science philosophy and psychology political science and education sociology and law and rhetoric and artificial intelligence This presents the growing group of interested scholars and students with a problem of access since it is even for those active in the field not common to have acquired a familiarity with relevant aspects of each discipline that enters into this multidisciplinary matrix This book offers its readers a unique comprehensive survey of the various theoretical contributions which have been made to the study of argumentation It discusses the historical works that provide the background to the field and all major approaches and trends in contemporary research Argument has been the subject of systematic inquiry for twenty five hundred years It has been graced with theories such as formal logic or the legal theory of evidence that have acquired a more or less settled provenance with regard to specific issues But there has been nothing to date that qualifies as a unified general theory of argumentation in all its richness and complexity This being so the argumentation theorist must have access to materials and methods that lie beyond his or her home subject It is precisely on this account that this volume is offered to all the constituent research communities and their students Apart from the historical sections each chapter provides an economical introduction to the problems and methods that characterize a given part of the contemporary research program Because the chapters are self contained they can be consulted in the order of a reader s interests or research requirements But there is value in reading the work in its entirety Jointly authored by the very people whose research has done much to define the current state of argumentation theory and to point the way toward more general and unified future treatments this book is an impressively authoritative contribution to the field

Handbook of the Logic of Argument and Inference R.H. Johnson, H.J. Ohlbach, Dov M.

Gabbay, John Woods, 2002-09-11 The Handbook of the Logic of Argument and Inference is an authoritative reference work in

a single volume designed for the attention of senior undergraduates graduate students and researchers in all the leading research areas concerned with the logic of practical argument and inference After an introductory chapter the role of standard logics is surveyed in two chapters These chapters can serve as a mini course for interested readers in deductive and inductive logic or as a refresher Then follow two chapters of criticism one the internal critique and the other the empirical critique The first deals with objections to standard logics as theories of argument and inference arising from the research programme in philosophical logic The second canvasses criticisms arising from work in cognitive and experimental psychology The next five chapters deal with developments in dialogue logic interrogative logic informal logic probability logic and artificial intelligence The last chapter surveys formal approaches to practical reasoning and anticipates possible future developments Taken as a whole the Handbook is a single volume indication of the present state of the logic of argument and inference at its conceptual and theoretical best Future editions will periodically incorporate significant new developments

Arguments and Reason-Giving Matthew W. McKeon,2024 Arguments figure in our everyday practices of giving reasons For example we use arguments to advance reasons to explain why we believe or did something to justify our beliefs or actions to persuade others to do or to believe something and to advance reasons to worry or to fear that something is true This book is about our uses of arguments to advance their premises as reasons for believing their conclusions i e as reasons for believing that their conclusions are true What exactly is involved when you successfully use an argument to advance the premises as reasons for believing the conclusion Philosopher Matthew W McKeon suggests there is more involved than one might think

Inside Arguments Henrique Jales Ribeiro,2012-04-25 This volume includes a collection of eighteen essays that provide a decisive input to the study of logic and argumentation theory by some of the finest specialists in these areas covering the main schools of thought and contemporary trends at the beginning of the 21st century In these essays the authors clarify the status of what we currently call ambiguously and problematically logic and argumentation theory and discuss the no less controversial issue of the relationship between these two concepts when applied to the study of argumentation and its problems At the same time they take stock of the most recent developments of argumentation theory considered as an ongoing research subject It is the first time in the last few decades that a work this comprehensive and up to date on such matters has been published This volume is an essential tool for all of those interested in the study of the relations between logic and argumentation particularly at the university level It provides not only an introduction to these subjects but also the necessary framework for further specialised research development in the future
