Slope Analysis Using Boundary Elements:

Slope Analysis Using Boundary Elements Yansheng Jiang, 2013-03-09 The aim of this book is to provide a new angle on the analysis of slope stability with the Boundary Element Method The main advantages of BEM are the reduction of the dimensionality of the problem to be solved and accurate selective calculation of internal stresses This makes it possible as shown in the book to develop the algorithms of slip surface analysis of slope more accurate more rigorous and more easy to be used than in the conventional limit equilibrium methods The full elastoplastic analysis of slope is also investigated Besides the interested reader can find a detailed study of Melan's fundamental solution such as its displacements its corresponding Galerkin tensor and the treatment of body forces in the half plane The basic theory of BEM is outlined in the book so that undergraduate and graduate students of civil engineering mining engineering and engineering geology can read it without difficulty

Engineering Optimization in Design Processes Hans A. Eschenauer, Claus Mattheck, Niels Olhoff, 2012-12-06 These proceedings contain the texts of 37 contributions presented at the International Conference on Engineering Optimization in an Industrial Environment which took place on 3-4 September 1990 at the Karlsruhe Nuclear Research Center I.H. Germany The presentations consisted of oral and poster contributions arranged in five sessions Shape

and layout optimization Structural optimization with advanced materials Optimal designs with special structural and material behaviour Sensitivity analysis Programme systems Optimization with stability constraints Special problems The editors wish to express their appreciation to all authors and invited speakers for their interesting contributions The proceedings cover a wide range of topics in structural optimization representing the present state of the art in the fields of research and in the industrial environment as well The editors hope that this book will also contribute towards new ideas and concepts in a world of ever decreasing natural resources and ever increasing demands for lighter and yet stronger and safer technical components Finally the editors wish to thank all colleagues who helped in the organisation of the conference especially Mrs E Schroder and Dr K Iethge as well as Mr A von Hagen and Mrs E Haufelder Springer Publishing Company Heidelberg for the good cooperation and help in the publication of these proceedings

An Artificial Intelligence Approach to Integrated Circuit Floorplanning Marwan A. Jabri, 2012-12-06 In 1984 while I was following his postgraduate course on VLSI design my supervisor Dr David Skellern asked me if I was interested in investigating intelligent approaches to automatic IC floorplanning He told me then a circuit that works always looks nice has a clever data and control flow A fast way to look at students IC projects is by looking at their floorplans Later I took a course on Knowledge Engineering KE and Artificial Intelligence AI with Professor John Gero who encouraged me to investigate this area of design automation The resources for such development were really poor at IS E as KE was a relatively new field of research in Australia at that time Whatever the difficulties a good programmer never blames his tools as David Skellern used to tell me I undertook the investigation of Knowledge Based approaches to IC floor planning as my PhD thesis subject with the help of my supervisor and John Gero and the encouragement of all researchers at IS E who provided an exciting environment for my research This volume reports the results of my research during 1984 1985 1986 and 1987 The volume deals with IC floorplanning from four perspectives floorplanning strategy Knowledge Engineering in the IC domain the development of knowledge based floorplanning processes and new floorplanning algorithms for use in the overall strategy

Virtual Distortion Method Jan Holnicki-Szulc, 2012-12-06 The theory of virtual distortions provides an efficient tool which can be used to treat many problems that differ from the physical point of view The objective of this book is to present a general concept of the Virtual Distortion Method with the necessary theoretical background and a variety of its applications to problems of structural analysis and design The book is focussed more on theoretical aspects of the problems than on the practical design of structures Nevertheless a number of numerical algorithms discussed in the book has already been developed as a computational system capable to solve various problems of structural analysis

Wave Breaking Carlos M. Lemos, 2013-03-13 In this monograph a finite difference algorithm for studying two dimensional wave breaking in the vertical plane is developed The essential feature of this algorithm is the combination of the Volume of Fluid VOF technique for arbitrary free surfaces and the k- ϵ turbulence model This methodology allows a self contained study for wave transformation processes in shallow

water before during and after breaking This capability is illustrated in several calculations This book will be of interest for final year graduates postgraduates and researchers working in the fields of turbulence modelling wave hydrodynamics coastal engineering and oceanography of coastal regions

Expert Systems in Structural Safety Assessment Aleksandar S. Jovanovic, Karl F. Kussmaul, Alfredo C. Lucia, Piero P. Bonissone, 1989 Structural safety of industrial systems and components raises a steadily growing public scientific and engineering interest and causes permanent development of methods and techniques used for its assessment In addition to the well established engineering methods applied in the field several new methods and tools have emerged recently Among them the most novel ones are probably those related to expert system applications appearing as an important possible improvement of the current engineering practice The issue has been addressed by the international course EXPERT SYSTEMS IN STRUCTURAL SAFETY ASSESSMENT organized by MPA Stuttgart and JRC Ispra Stuttgart October 2-4 1989 and the proceedings of the course are contained in this volume of the Lecture Notes in Engineering The contributions invited lectures tackle the issues usually confronting developers and users of expert systems applied in structural engineering i.e. in structural safety and integrity assessment Both the book and the course are a combination of a tutorial and of presentation of the current achievements in the field Starting from the basic elements of expert systems knowledge based systems the book should guide the reader up to the applications in various particular sub domains
