Small World Level 7:

Complex Sciences Jie Zhou, 2009-06-26 I was invited to join the Organizing Committee of the First International Conference on Complex Sciences Theory and Applications Complex 2009 as its ninth member At that moment eight distinguished colleagues General Co chairs Eugene Stanley and Gaoxi Xiao Technical Co chairs J nos Kert sz and Bing Hong Wang Local Co chairs Hengshan Wang and Hong An Che Publicity Team Shi Xiao and Yubo Wang had spent hundreds of hours pushing the conference half way to its birth Ever since then I have been amazed to see hundreds of papers flooding in reviewed and commented on by the TPC members Finally more than 200 contributions were lected for the proceedings currently in your hands They include about 200 papers from the main conference selected from more than 320 submissions and about 33 papers from the five collated workshops Complexity Theory of Art and Music COART Causality in Complex Systems ComplexCCS Complex Engineering Networks ComplexEN Modeling and Analysis of Human Dynamics MANDYN Social Physics and its Applications SPA Complex sciences are expanding their colonies at such a dazzling speed that it comes literally impossible for any conference to cover all the frontiers

Brain Networks in Aging: Reorganization and Modulation by Interventions Junfeng Sun, Chunbo Li, 2018-02-22 Old adults undertake multiple reduced cognitive abilities in aging which are accompanied with specific brain reorganization in forms of regional brain activity and brain tissues inter region connectivity and topology of whole brain networks in both function and structure The plasticity changes of brain activities in old adults are explained by the mechanisms of compensation and dedifferentiation For example older adults have been observed to have greater usually bilateral prefrontal activities during memory tasks compared to the typical unilateral prefrontal activities in younger adults which was explained as a compensation for the reduced brain activities in visual processing cortices Dedifferentiation is another mechanism to explain that old adults are with much less selective and less distinct activity in task relevant brain regions compared with younger adults A larger number of studies have examined the plasticity changes of brain from the perspective of regional brain activities However studies on only regional brain activities cannot fully elucidate the neural mechanisms of reduced cognitive abilities in aging as multiple regions are integrated together to achieve advanced cognitive function in human brain In recent years brain connectivity network which targets how brain regions are integrated have drawn increasing attention in neuroscience with the development of neuroimaging techniques and graph theoretical analysis Connectivity quantifies functional association or neural fibers between two regions that may be spatially far separated and graph theoretical analysis of brain network examines the complex interactions among multiple regions from the perspective of topology Studies showed that compared to younger adults older adults had altered strength of task relevant functional connectivity between specific brain regions in cognitive tasks and the alternation of connectivity are correlated to behavior performance For example older adults had weaker functional connectivity between the premotor cortex and a region in the left dorsolateral prefrontal cortex in a working memory task Interventions like

cognitive training and neuro modulation e g transcranial magnetic stimulation have been shown to be promising in regaining or retaining the decreasing cognitive abilities in aging However only few neuroimaging studies have examined the influence of interventions to old adult s brain activity connectivity and cognitive performance This Research Topic calls for contributions on brain network of subjects in normal aging or with age related diseases like mild cognitive impairment and Alzheimer s disease The studies are expected to be based on neuroimaging techniques including but not limited to functional magnetic resonance imaging Electroencephalography and diffusion tensor imaging and contributions on the influence of interventions to brain networks in aging are highly encouraged All these studies would enrich our understanding of neural mechanisms underlying aging and offer new insights for developing possible interventions to retain cognitive abilities in aging subjects
