The Genetics Explosion:

The Genetics Explosion Alvin Silverstein, Virginia B. Silverstein, 1985 Discusses genetics and genetic diseases and discusses the controversy over genetic engineering emphasizing both its potential benefits and its potential health hazards

The Effects of High-yield Nuclear Explosions, Statement by Lewis L. Strauss, Chairman and a Report by the United States Atomic Energy Commission U.S. Atomic Energy Commission, 1955

Exploding the Gene Myth Ruth Hubbard, Elijah Wald, 1993 Is human behavior genetic Do we inherit our intelligence our sexuality our predispositions to illness or depression or our particular talents through our genes Newspaper headlines today tout genetic explanations of everything from cancer to alcoholism and criminality But as *Exploding the Gene Myth* demonstrates such explanations are nearly always exaggerated or unfounded ignoring the complex interactions of genes with environment at every level Like the eugenic theories of seventy five years ago the new genetic determinism serves a conservative social agenda reflecting our society's eagerness to blame ill health and misfortune on individuals rather than on social and environmental conditions *Exploding the Gene Myth* explains in clear accessible language how genes really work Ruth Hubbard and Elijah Wald then evaluate the tremendous impact of genetic information on how we are treated by doctors and health insurance companies by schools by the criminal justice system and by potential employers The authors are especially critical of the multi billion dollar Human Genome Initiative the huge research project to map every gene on the DNA of a prototypical human being Hubbard and Wald deflate the grandiose promises of therapeutic benefits that are supposed to emerge from the project They point instead to the real threats to privacy and civil liberties already resulting from the unregulated increase in genetic predictions At a time when the biosciences are undergoing a revolution the enthusiasm of scientists and the media about new genetic information and technologies needs to be tempered with realism Hubbard and Wald argue that all citizens not just scientists should be able to participate in making the necessary decisions about how to regulate information protect privacy and avoid discrimination *Exploding the Gene Myth* is a forceful plea for a society that would invest in safe healthful living and working conditions for everyone rather than the search for ideal or improved genes

Epigenetic Mechanisms of the Cambrian Explosion Nelson R Cabej, 2019-10-12

Epigenetic Mechanisms of the Cambrian Explosion provides readers with a basic biological knowledge and epigenetic explanation of the biological puzzle of the Cambrian explosion the unprecedented rapid diversification of animals that began 542 million years ago During an evolutionarily instant of 10 million years which represents only 0.3% of the time of existence of life on Earth or less than 2% of the time of existence of metazoans all of the 30 extant body plans major animal groups phyla and several extinct groups appeared The work helps address this phenomena and tries to answer remaining questions for evolutionary biology epigenetics and scientific researchers The book recognizes and presents objective representations of alternative theories for epigenetic evolution in this period with the author drawing on his epigenetic theory of evolution to

explain the causal basis of the Cambrian explosion Both empirical evidence and theoretical arguments are presented in support of this thought provoking epigenetic theory Explains the Cambrian explosion from an entirely epigenetic view Takes a causal rather than descriptive approach to the phenomenon Allows for a broad readership including those with only a basic biological knowledge while maintaining scientific rigor [Hox Genes](#) Jean S. Deutsch,2011-01-11 In his 1894 book Materials for the Study of Variation William Bateson coined the term Homoeosis with the following prose The case of the modification of the antenna of an insect into a foot of the eye of a Crustacean into an antenna of a petal into a stamen and the like are examples of the same kind It is desirable and indeed necessary that such Variations which consist in the assumption by one member of a Meristic series of the form or characters proper to other members of the series should be recognized as constituting a distinct group of phenomena I therefore propose the term HOMOEOSIS for the essential phenomenon is not that there has merely been a change but that something has been changed into the likeness of something else The book was intended as a listing of the kinds of naturally occurring variation that could act as a substrate for the evolutionary process and Bateson took his examples from collections both private and in museums of materials displaying morphological oddities Interestingly the person who also coined the term Genetics proffered little in the way of speculation on the possible genetic underpinnings of these oddities It wasn't until the early part of the next century that these changes in meristic series were shown to be heritable
