Traffic Data Collection:

Traffic Data Collection and Analysis Alexander French, 1986 This synthesis will be of interest to traffic engineers highway planners and others concerned with the collection of traffic data for traffic engineering studies for long range planning and for evaluation of traffic law enforcement Information is presented on current practice in traffic data collection and analysis Although types of highway traffic data collected over the past 50 years have not changed significantly the quantities analysis procedure and presentations of these data have changed as a result of changing policies operational concerns and capabilities resulting from new technologies This report of the Transportation Research Board describes the technology both hardware and software that is being used for traffic data collection and discusses technological advances that have not yet been applied to the acquisition and presentation of traffic data

Traffic Data Collection and its Standardization Jaume Barceló, Masao Kuwahara, 2010-07-20 A nice night of October 2007 in Beijing during the XV World Conference on ITS a number of colleagues met informally for a dinner party that spontaneously became a vivid discussion on the importance of traffic data for all types of poses Researchers can hardly do any progress in modeling developing and testing theories without suitable data and what practitioners can do in real life is limited not only by technology but also by the availability of the required data Quite frequently the data and not the technologies are what determine how far we can go Any discussion about traffic data leads in a natural way to a discussion on the variety of traffic data sources formats levels of aggregation accuracies and so on Consequently we moved to talk on the initiative that Kuwahara had undertaken in his traffic laboratory at the University of Tokyo known as the International Traffic Data Base and thus smoothly but inexorably we came to agree that it would be convenient to organize a workshop to continue our discussion at a more formal level share our points of view with other colleagues listen what they had to say and if possible disseminate the findings in our professional and academic communities

Traffic Data Collection Processes Study Michael Marti, Renae Kuehl, Scott Petersen, Minnesota. Department of Transportation. Research Services and Library, SRF Consulting Group, Minnesota Local Road Research Board, 2014 The Minnesota Department of Transportation MnDOT collects traffic volume counts for cities and counties outside of the Twin Cities Metro Area Volume coverage counts are performed on various roads including trunk highways county roads county state aid highways and municipal state aid streets The counts assist with planning design development maintenance priorities and snow removal This research implementation project considered options for cities and counties to gather traffic data the focus of this project was to shadow three data collection

processes The three collection processes include MnDOT collecting the data current process the respective county collecting the data with equipment and training provided by MnDOT and a consultant collecting the data Sibley County volunteered to administer the county data collection process MnDOT data collection is generally collected by District field technicians The Sibley County data collection was conducted by County staff including an engineering intern After the data collection process each organization was interviewed to determine the effectiveness of the data collection method A quantitative analysis determined how long each organization spent per count site
