

## Transfer Pricing Problem – Step-by-Step Solution & Exam Guide

### Step 1: Understand the Question

We have Tech Friendly Computer with 3 divisions in China, South Korea, and the U.S. Each division operates as a profit center. We need to calculate after-tax operating income per unit for each division under 3 transfer pricing methods: (a) Market price, (b) 200% of full cost, (c) 350% of variable cost. Finally, determine which method maximizes after-tax operating income for the entire company.

### Step 2: Key Data & Conversion

Exchange rates: 9 Yuan = \$1, 1000 Won = \$1 Retail price in U.S.: \$3,800

Division Costs: - China: Variable = ¥900, Fixed = ¥1,980 → In USD: Var = \$100, Fixed = \$220 -

South Korea: Variable = ■3,50,000, Fixed = ■4,70,000 → In USD: Var = \$350, Fixed = \$470 - U.S.:

Variable = \$125, Fixed = \$325

Market prices for transfer pricing: China to SK = ¥4,500 (\$500), SK to U.S. = ■13,40,000 (\$1,340)

**Addressing the Transfer-pricing Problem in an Origin-basis X Tax** David F. Bradford,2003 In a previous paper I described how the tax design called the X Tax would facilitate an international tax system free of many of the complexities and avoidance opportunities plaguing the existing international tax regime and also have neutrality properties generally deemed desirable A choice must however be made between two basic treatments of transborder business transactions the origin and destination principles The destination principle approach sidesteps the need to identify arm s length terms of transborder transactions between related business entities the transfer pricing problem This serious problem remains in the origin principle approach which however presents fewer challenges of monitoring the flow of goods and services across borders obviates what I call the tourism problem whereby people can reduce their taxes by consuming in a low tax jurisdiction and arguably most important avoids transition effects associated with introduction of the tax and subsequent tax rate changes that occur in the destination approach In this paper I explore possible special rules for transborder transactions between related parties in an origin based system to eliminate the transfer pricing problem *The Transfer Pricing Problem and the Multinational Firm* Roger Edward Roberts,1967 **Global Tax Fairness** Thomas Pogge,Krishen Mehta,2016-02-04 This book addresses sixteen different reform proposals that are urgently needed to correct the fault lines in the international tax system as it exists today and which deprive both developing and developed countries of critical tax resources It offers clear and concrete ideas on how the reforms can be achieved and why they are important for a more just and equitable global system to prevail The key to reducing the tax gap and consequent human rights deficit in poor countries is global financial transparency Such transparency is essential to curbing illicit financial flows that drain less developed countries of capital and tax revenues and are an impediment to sustainable development A major break through for financial transparency is now within reach The policy reforms outlined in this book not only advance tax justice but also protect human rights by curtailing illegal activity and making available more resources for development While the reforms are realistic they require both political and an informed and engaged civil society that can put pressure on governments and policy makers to act
