Patterns of Growth and Development in the Genus Homo J. L. Thompson, G. E. Krovitz, A. J. Nelson, 2003-12-04 It is generally accepted that the earliest human ancestors grew more like apes than like humans today If they did so and we are now different when how and why did our modern growth patterns evolve This book focuses on species within the genus *Homo* to investigate the evolutionary origins of characteristic human patterns and rates of craniofacial and postcranial growth and development and to explore unique ontogenetic patterns within each fossil species Experts examine growth patterns found within available Plio Pleistocene hominid samples and analyse variation in ontogenetic patterns and rates of development in recent modern humans in order to provide a comparative context for fossil hominid studies Presenting studies of some of the newer juvenile fossil specimens and information on *Homo* antecessor this book will provide a rich data source with which anthropologists and evolutionary biologists can address the questions posed above

Morphology, Shape and Phylogeny Norman MacLeod, Peter L. Forey, 2002-02-07 Generally biologists and mathematicians who study the shape and form of organisms have largely been working in isolation from those who work on evolutionary relationships through the analysis of common characteristics Increasingly however dialogue between the two communities is beginning to develop but other than a handful of journal papers there has been no formal published discussion on this subject This timely book summarises the interdisciplinary work that has taken place and will stimulate additional research into these topics Any scientist working on evolutionary

relationships will find this volume invaluable **Proceedings on the 10th Teratology Symposium** Richard Vogel,2001
