*Vectors, Matrices and Geometry* K.T. Leung,S.N. Suen,1994-08-01 This book is the last volume of a three book series written for Sixth Form students and first year undergraduates It introduces the important concepts of finite dimensional vector spaces through the careful study of Euclidean geometry In turn methods of linear algebra are then used in the study of coordinate transformations through which a complete classification of conic sections and quadric surfaces is obtained The book concludes with a detailed treatment of linear equations in n variables in the language of vectors and matrices Illustrative examples are included in the main text and numerous exercises are given in each section The other books in the series are *Fundamental Concepts of Mathematics* published 1988 and *Polynomials and Equations* published 1992

**Introduction to Matrices and Vectors** Jacob T. Schwartz,2012-05-23 Realizing that matrices can be a confusing topic for the beginner the author of this undergraduate text has made things as clear as possible by focusing on problem solving rather than elaborate proofs He begins with the basics offering students a solid foundation for the later chapters on using special matrices to solve problems The first three chapters present the basics of matrices including addition multiplication and division and give solid practice in the areas of matrix manipulation where the laws of algebra do not apply In later chapters the author introduces vectors and shows how to use vectors and matrices to solve systems of linear equations He also covers special matrices including complex numbers quaternion matrices and matrices with complex entries and transpose matrices the trace of a matrix the cross product of matrices eigenvalues and eigenvectors and infinite series of matrices Exercises at the end of each section give students further practice in problem solving Prerequisites include a background in algebra and in the later chapters a knowledge of solid geometry The book was designed as an introductory text for college freshmen and sophomores but selected chapters can also be used to supplement advanced high school classes Professionals who need a better understanding or review of the subject will also benefit from this concise guide

**Unsupervised Feature Extraction Applied to Bioinformatics** Y-h. Taguchi, 2019-08-23 This book proposes applications of tensor decomposition to unsupervised feature extraction and feature selection The author posits that although supervised methods including deep learning have become popular unsupervised methods have their own advantages He argues that this is the case because unsupervised methods are easy to learn since tensor decomposition is a conventional linear methodology This book starts from very basic linear algebra and reaches the cutting edge methodologies applied to difficult situations when there are many features variables while only small number of samples are available The author includes advanced descriptions about tensor decomposition including Tucker decomposition using high order singular value decomposition as well as higher order orthogonal iteration and train tenor decomposition The author concludes by showing unsupervised methods and their application to a wide range of topics Allows readers to analyze data sets with small samples and many features Provides a fast algorithm based upon linear algebra to analyze big data Includes several applications to multi view data analyses with a focus on bioinformatics *Applied Deep*

*Learning with Keras* Ritesh Bhagwat, Mahla Abdolahnejad, Matthew Moocarme, 2019-04-24 Take your neural networks to a whole new level with the simplicity and modularity of Keras the most commonly used high level neural networks API Key Features Solve complex machine learning problems with precision Evaluate tweak and improve your deep learning models and solutions Use different types of neural networks to solve real world problems Book Description Though designing neural networks is a sought after skill it is not easy to master With Keras you can apply complex machine learning algorithms with minimum code Applied Deep Learning with Keras starts by taking you through the basics of machine learning and Python all the way to gaining an in depth understanding of applying Keras to develop efficient deep learning solutions To help you grasp the difference between machine and deep learning the book guides you on how to build a logistic regression model first with scikit learn and then with Keras You will delve into Keras and its many models by creating prediction models for various real world scenarios such as disease prediction and customer churning You ll gain knowledge on how to evaluate optimize and improve your models to achieve maximum information Next you ll learn to evaluate your model by cross validating it using Keras Wrapper and scikit learn Following this you ll proceed to understand how to apply L1 L2 and dropout regularization techniques to improve the accuracy of your model To help maintain accuracy you ll get to grips with applying techniques including null accuracy precision and AUC ROC score techniques for fine tuning your model By the end of this book you will have the skills you need to use Keras when building high level deep neural networks What you will learn Understand the difference between single layer and multi layer neural network models Use Keras to build simple logistic regression models deep neural networks recurrent neural networks and convolutional neural networks Apply L1 L2 and dropout regularization to improve the accuracy of your model Implement cross validate using Keras wrappers with scikit learn Understand the limitations of model accuracy Who this book is for If you have basic knowledge of data science and machine learning and want to develop your skills and learn about artificial neural networks and deep learning you will find this book useful Prior experience of Python programming and experience with statistics and logistic regression will help you get the most out of this book Although not necessary some familiarity with the scikit learn library will be an added bonus

**PETSc for Partial Differential Equations: Numerical Solutions in C and Python** Ed Bueler, 2020-10-22 The Portable Extensible Toolkit for Scientific Computation PETSc is an open source library of advanced data structures and methods for solving linear and nonlinear equations and for managing discretizations This book uses these modern numerical tools to demonstrate how to solve nonlinear partial differential equations PDEs in parallel It starts from key mathematical concepts such as Krylov space methods preconditioning multigrid and Newton s method In PETSc these components are composed at run time into fast solvers Discretizations are introduced from the beginning with an emphasis on finite difference and finite element methodologies The example C programs of the first 12 chapters listed on the inside front cover solve mostly elliptic and parabolic PDE problems Discretization leads to large sparse and generally nonlinear systems of algebraic equations For such

problems mathematical solver concepts are explained and illustrated through the examples with sufficient context to speed further development PETSc for Partial Differential Equations addresses both discretizations and fast solvers for PDEs emphasizing practice more than theory Well structured examples lead to run time choices that result in high solver performance and parallel scalability The last two chapters build on the reader's understanding of fast solver concepts when applying the Firedrake Python finite element solver library This textbook the first to cover PETSc programming for nonlinear PDEs provides an on ramp for graduate students and researchers to a major area of high performance computing for science and engineering It is suitable as a supplement for courses in scientific computing or numerical methods for differential equations

**Introduction to Vectors, Matrices and Tensors** Simone Malacrida, 2022-12-21 The theoretical assumptions of the following mathematical topics are presented in this book vectors and vector calculus matrices and matrix calculus vector and matrix spaces mathematics and tensor calculus

**Vectors, Matrices, Quaternions** Eliakim Hastings Moore, 1924

**Vectors and Matrices** Cyrus Colton MacDuffee, 1943-12-31 In 1943 a course in linear algebra did not yet exist as a standard part of the undergraduate curriculum It would be another twenty years before that would become common It is however easy to identify the defining features of that course in this volume Start with the idea of solving linear systems change the point of view to that of transformations on vector spaces recognize similarity as an essential classifying principle and catalogue the canonical forms Jordan normal form of the transformations All of this is here but with a decided old fashioned algebraic accent there is only one figure in the entire text

**Vectors, Matrices and C++ Code** Sergio Pissanetzky, 2004-10 Presented here is an integrated approach perhaps the first in its class of the basics of vector and matrix Algebra at College level with the object oriented C code that implements the vector and matrix objects and brings them to life Thinking in terms of objects is the natural way of thinking The concept of object has existed in Science for centuries More recently objects were introduced in Computation and object oriented programming languages were created Yet the concept of object is not routinely used when teaching Science and the idea that objects can come alive in a computer has not yet been fully exploited This book integrates basic vector and matrix Algebra with object oriented concepts and the actual code implementing them It is both a textbook and a software release complete with software documentation and the mathematical background that supports the code The source code is included by download and readers can use it for their own programming The reader will need a basic knowledge of Mathematical notation Algebra and Trigonometry but familiarity with C is not required because a course on C is also included You should read this book if you are a developer who needs a background in vector or matrix algebra a science student who needs to learn C a scientist who needs to write advanced code but can't waste time developing the basics or you just need ready to use C source code for your project
