

NOT TOO HOT, NOT TOO COLD

The internal body temperature is regulated by a part of our brain called the **hypothalamus**. The hypothalamus checks our current temperature and **compares it with the normal temperature of about 37°C.**

If your body temperature is low

The hypothalamus makes sure that the body generates and maintains heat

If your body temperature is high

Your body gives off heat/initiates sweating to cool the skin

www.ck12.org
CK12

This **GAINING & LOSING** of heat occurs through a process called **HEAT TRANSFER.**

Why Is It Cold

Mark Steyvers

Why Is It Cold:

Eventually, you will categorically discover a additional experience and realization by spending more cash. still when? realize you receive that you require to get those every needs as soon as having significantly cash?
