High Definition Metrology Based Surface Quality Control and Applications Shichang Du, Lifeng Xi, 2019-10-18 This book provides insights into surface quality control techniques and applications based on high definition metrology HDM Intended as a reference resource for engineers who routinely use a variety of quality control methods and are interested in understanding the data processing from HDM data to final control actions it can also be used as a textbook for advanced courses in engineering quality control applications for students who are already familiar with quality control methods and practices It enables readers to not only assimilate the quality control methods involved but also to quickly implement the techniques in practical engineering problems Further it includes numerous case studies to highlight the implementation of the methods using measured HDM data of surface features Since MATLAB is extensively employed in these case studies familiarity with this software is helpful as is a general understanding of surface quality control methods *State-of-the-Art Laser Spectroscopy and its Applications : Volume II* Yufei Ma, Qun Hao, Karol Krzempek, 2023-02-09 Fundamentals of Aperture Antennas and Arrays Trevor S. Bird, 2015-11-02 This book is intended as an advanced text for courses in antennas with a focus on the mature but vital background field of aperture antennas The book is aimed at final year MSc PhD and Post Doctoral students as well as readers who are moving from academia into industry beginning careers as wireless engineers system designers in R D or for practising engineers It assumes the reader has undertaken an earlier course of study on Maxwell s equations fields and waves Some of these topics are summarised in the early few chapters in order to provide continuity and background for the remaining chapters The aperture antennas covered include the main types of horns reflectors and arrays as well as microstrip patches reflectarrays and lenses To provide more than a superficial treatment of arrays the topic of mutual coupling is covered in greater detail than most similar books in the area Also included is an introduction to arrays on non planar surfaces which is of importance for applications that involve curved surfaces such as in aerodynamics or for making aperture antennas unobtrusive A chapter is included on some modern aperture antennas to illustrate design techniques beyond the most common types of aperture antennas described in the early chapters This is to show where advances have recently been made and where they could be improved in the future Also included are selected topics of a practical nature for aperture antennas namely fabrication and measurement **Twin-Control** Mikel Armendia, Mani Ghassempouri, Erdem Ozturk, Flavien Peysson, 2019-01-05 This open access book summarizes the results of the European research project Twin model based virtual manufacturing for machine tool process simulation and control Twin Control The first part reviews the applications of ICTs in machine tools and manufacturing from a scientific and industrial point of view and introduces the Twin Control approach while Part 2 discusses the development of a digital twin of machine tools The third part addresses the monitoring and data management infrastructure of machines and manufacturing processes and numerous applications of energy monitoring Part 4 then highlights various features developed in the project by

combining the developments covered in Parts 3 and 4 to control the manufacturing processes applying the so called CPSs Lastly Part 5 presents a complete validation of Twin Control features in two key industrial sectors aerospace and automotive The book offers a representative overview of the latest trends in the manufacturing industry with a focus on machine tools
