Statistical Modelling In Hydrology:

Statistical Modelling in Hydrology R. T. Clarke, 1994 **Stochastic and Statistical Methods in Hydrology and Environmental Engineering** Keith W. Hipel, 2012-12-06 Objectives The current global environmental crisis has reinforced the need for developing flexible mathematical models to obtain a better understanding of environmental problems so that effective remedial action can be taken Because natural phenomena occurring in hydrology and environmental engineering usually behave in random and probabilistic fashions stochastic and statistical models have major roles to play in the protection and restoration of our natural environment Consequently the main objective of this edited volume is to present some of the most up to date and promising approaches to stochastic and statistical modelling especially with respect to groundwater and surface water applications Contents As shown in the Table of Contents the book is subdivided into the following main parts GENERAL ISSUES PART I PART II GROUNDWATER PART III SURFACE WATER PART IV STOCHASTIC OPTIMIZATION PART V MOMENT ANALYSIS PART VI OTHER TOPICS Part I raises some thought provoking issues about probabilistic modelling of hydro logical and environmental systems The first two papers in Part I are in fact keynote papers delivered at an international environmetrics conference held at the University of Waterloo in June 1993 in honour of Professor T E Unny In his keynote pa per Dr S J Burges of the University of Washington places into perspective the historical and future roles of stochastic modelling in hydrology and environmental engineering Additionally Dr Burges stresses the need for developing a sound scien tific basis for the field of hydrology Professor P E Statistical Methods in Hydrology Charles T Haan, 2002-09-09 This classic text and reference has been totally revised redesigned and comprehensively updated for the new millennium and beyond bound in a new revamped hardcover version Inside the reader will find improved coverage of time series analysis by the addition of a treatment of IRIMA models improved coverage of regression with the addition of consideration of multicollinearity and correlated errors increased material on Bayesian statistics and a major section on the use of statistics in hydrologic and water quality modeling which includes sensitivity analysis Monte Carlo simulation First Order Analysis uncertainty analysis parameter estimation for models and calibration and verification of models A greater emphasis in this new edition has been on the use of computers in statistical analysis without the dependence on any one particular software vendor The reader of this new edition will also notice improved coverage on plotting and graphical analysis and some added coverage of nonparametric terms applicable in hydrology Exercises follow nearly every chapter for increased retention and learning Modeling Hydrologic Change Richard H. McCuen, 2016-04-19 Modeling hydrologic changes and predicting their impact on watersheds is a dominant concern for hydrologists and other water resource professionals civil and environmental engineers and urban and regional planners As such changes continue it becomes more essential to have the most up to date tools with which to perform the proper analyses and m *Stochastic and Statistical Methods in Hydrology and Environmental Engineering* ,1994 *Fundamentals of Statistical Hydrology*

Mauro Nighettini,2016-10-26 This textbook covers the main applications of statistical methods in hydrology It is written for upper undergraduate and graduate students but can be used as a helpful guide for hydrologists geographers meteorologists and engineers The book is very useful for teaching as it covers the main topics of the subject and contains many worked out examples and proposed exercises Starting from simple notions of the essential graphical examination of hydrological data the book gives a complete account of the role that probability considerations must play during modelling diagnosis of model fit prediction and evaluating the uncertainty in model predictions including the essence of Bayesian application in hydrology and statistical methods under nonstationarity The book also offers a comprehensive and useful discussion on subjective topics such as the selection of probability distributions suitable for hydrological variables On a practical level it explains MS Excel charting and computing capabilities demonstrates the use of Winbugs free software to solve Monte Carlo Markov Chain MCMC simulations and gives examples of free R code to solve nonstationary models with nonlinear link functions with climate covariates

Stochastic and Statistical Methods in Hydrology and Environmental Engineering Keith W. Hipel,1994 *Statistical Analysis of Extreme Values* Rolf-Dieter Reiss,Michael Thomas,2007-06-21 This is a self contained introduction to parametric modeling exploratory analysis and statistical interference for extreme values as used in disciplines from hydrology to finance to environmental science Updated and expanded by 100 pages

Stochastic and Statistical Methods in Hydrology and Environmental Engineering Keith W. Hipel,2013-04-17 International experts from around the globe present a rich variety of intriguing developments in time series analysis in hydrology and environmental engineering Climatic change is of great concern to everyone and significant contributions to this challenging research topic are put forward by internationally renowned authors A range of interesting applications in hydrological forecasting are given for case studies in reservoir operation in North America Asia and South America Additionally progress in entropy research is described and entropy concepts are applied to various water resource systems problems Neural networks are employed for forecasting runoff and water demand Moreover graphical nonparametric and parametric trend analyses methods are compared and applied to water quality time series Other topics covered in this landmark volume include spatial analyses spectral analyses and different methods for stream flow modelling Audience The book constitutes an invaluable resource for researchers teachers students and practitioners who wish to be at the forefront of time series analysis in the environmental sciences

Statistical Analysis of Extreme Values Rolf-Dieter Reiss,Michael Thomas,2013-10-14 The statistical analysis of extreme data is important for various disciplines including hydrology insurance finance engineering and environmental sciences This book provides a self contained introduction to the parametric modeling exploratory analysis and statistical interference for extreme values The entire text of this third edition has been thoroughly updated and rearranged to meet the new requirements Additional sections and chapters elaborated on more than 100 pages are particularly concerned with topics like dependencies the conditional analysis and the multivariate modeling of extreme data Parts I III about the basic

extreme value methodology remain unchanged to some larger extent yet notable are e g the new sections about An Overview of Reduced Bias Estimation co authored by M I Gomes The Spectral Decomposition Methodology and About Tail Independence co authored by M Frick and the new chapter about Extreme Value Statistics of Dependent Random Variables co authored by H Drees Other new topics e g a chapter about Environmental Sciences co authored by R W Katz are collected within Parts IV VI

Statistical Analysis and Stochastic Modelling of Hydrological Extremes Hossein Tabari,2019-10-28 Hydrological extremes have become a major concern because of their devastating consequences and their increased risk as a result of climate change and the growing concentration of people and infrastructure in high risk zones The analysis of hydrological extremes is challenging due to their rarity and small sample size and the interconnections between different types of extremes and becomes further complicated by the untrustworthy representation of meso scale processes involved in extreme events by coarse spatial and temporal scale models as well as biased or missing observations due to technical difficulties during extreme conditions The complexity of analyzing hydrological extremes calls for robust statistical methods for the treatment of such events This Special Issue is motivated by the need to apply and develop innovative stochastic and statistical approaches to analyze hydrological extremes under current and future climate conditions The papers of this Special Issue focus on six topics associated with hydrological extremes Historical changes in hydrological extremes Projected changes in hydrological extremes Downscaling of hydrological extremes Early warning and forecasting systems for drought and flood Interconnections of hydrological extremes Applicability of satellite data for hydrological studies

Statistical Analysis of Hydrologic Variables Ramesh S. V. Teegavarapu,Jose D. Salas,Jery R. Stedinger,2019 This book provides a compilation of statistical analysis methods used to analyze and assess critical variables in the hydrological cycle

Stochastic Hydrology and its Use in Water Resources Systems Simulation and Optimization Juan B. Marco,R. Harboe,Jose D. Salas,1993 Stochastic hydrology is an essential base of water resources systems analysis due to the inherent randomness of the input and consequently of the results These results have to be incorporated in a decision making process regarding the planning and management of water systems It is through this application that stochastic hydrology finds its true meaning otherwise it becomes merely an academic exercise A set of well known specialists from both stochastic hydrology and water resources systems present a synthesis of the actual knowledge currently used in real world planning and management The book is intended for both practitioners and researchers who are willing to apply advanced approaches for incorporating hydrological randomness and uncertainty into the simulation and optimization of water resources systems
