The Classical Moment Problem and Some Related Questions in Analysis N.I. Akhiezer, 2020-12-01 The mathematical theory for many application areas depends on a deep understanding of the theory of moments These areas include medical imaging signal processing computer visualization and data science The problem of moments has also found novel applications to areas such as control theory image analysis signal processing polynomial optimization and statistical big data The Classical Moment Problem and Some Related Questions in Analysis presents a unified treatment of the development of the classical moment problem from the late 19th century to the middle of the 20th century Important connections between the moment problem and many branches of analysis are presented In this self contained text readers will find a unified exposition of important classical results which are difficult to read in the original journals as well as a strong foundation for many areas in modern applied mathematics Researchers in areas that use techniques developed for the classical moment problem will find the book of interest

[The Problem of Moments](#) James Alexander Shohat, Jacob David Tamarkin, 1943-12-31 The book was first published in 1943 and then was reprinted several times with corrections It presents the development of the classical problem of moments for the first 50 years after its introduction by Stieltjes in the 1890s In addition to initial developments by Stieltjes Markov and Chebyshev later contributions by Hamburger Nevanlinna Hausdorff Stone and others are discussed The book also contains some results on the trigonometric moment problem and a chapter devoted to approximate quadrature formulas

Noncommutative Geometry and Optimal Transport Pierre Martinetti, Jean-Christophe Wallet, 2016-10-26 The distance formula in noncommutative geometry was introduced by Connes at the end of the 1980s It is a generalization of Riemannian geodesic distance that makes sense in a noncommutative setting and provides an original tool to study the geometry of the space of states on an algebra It also has an intriguing echo in physics for it yields a metric interpretation for the Higgs field In the 1990s Rieffel noticed that this distance is a noncommutative version of the Wasserstein distance of order 1 in the theory of optimal transport More exactly this is a noncommutative generalization of Kantorovich dual formula of the Wasserstein distance Connes distance thus offers an unexpected connection between an ancient mathematical problem and the most recent discovery in high energy physics The meaning of this connection is far from clear Yet Rieffel's observation

suggests that Connes distance may provide an interesting starting point for a theory of optimal transport in noncommutative geometry This volume contains several review papers that will give the reader an extensive introduction to the metric aspect of noncommutative geometry and its possible interpretation as a Wasserstein distance on a quantum space as well as several topic papers

The Classical Moment Gail Holst-Warhaft, David R. McCann, 1999-04-29 The Classical Moment is a reexamination of the concept of a supreme moment in the literatures of Greece Mesopotamia India China Japan Korea and Vietnam Taking the case of Greece as its starting point it examines what such moments have in common how they are created and what effect they have on subsequent literary creation

Jacobi Matrices and the Moment Problem Yuriy M. Berezansky, Mykola E. Dudkin, 2023-11-29 This monograph presents the solution of the classical moment problem the construction of Jacobi matrices and corresponding polynomials The cases of strongly trigonometric complex and real two dimensional moment problems are discussed and the Jacobi type matrices corresponding to the trigonometric moment problem are shown The Berezansky theory of the expansion in generalized eigenvectors for corresponding set of commuting operators plays the key role in the proof of results The book is recommended for researchers in fields of functional analysis operator theory mathematical physics and engineers who deal with problems of coupled pendulums

The Classical Moment James V. Schall, 2014 The essays in this book all touch on knowledge and its pleasures Schall does not tarry on the effort and determination it often takes to say just what we want to say then say it and know that we have said it Our writing is our thinking our thinking through our being pleased to know this is it this is the point Schall one of America's greatest essayists makes here

The Origins of Neoliberalism Dotan Leshem, 2016-06-04 Dotan Leshem recasts the history of the West from an economic perspective bringing politics philosophy and the economy closer together and revealing the significant role of Christian theology in shaping economic and political thought He begins with early Christian treatment of economic knowledge and the effect of this interaction on ancient politics and philosophy He then follows the secularization of the economy in liberal and neoliberal theory Leshem draws on Hannah Arendt's history of politics and Michel Foucault's genealogy of economy and philosophy He consults exegetical and apologetic tracts homilies and eulogies manuals and correspondence and Church canons and creeds to trace the influence of the economy on Christian orthodoxy Only by relocating the origins of modernity in Late Antiquity Leshem argues can we confront the full effect of the neoliberal marketized economy on contemporary societies Then he proposes a new political philosophy that re secularizes the economy will take shape and transform the human condition

Society, 1987 Function theory spectral decomposition of operators probability approximation electrical and mechanical inverse problems prediction of stochastic processes the design of algorithms for signal processing VLSI chips these are among a host of important theoretical and applied topics illuminated by the classical moment problem To survey some of these ramifications and the research which derives from them the AMS sponsored the Short Course Moments in Mathematics at the Joint Mathematics Meetings held in San Antonio Texas in January 1987 This volume contains the six lectures presented during that course The papers are likely to find a wide audience for they are expository but nevertheless lead the reader to topics of current research In his paper Henry J Landau sketches the main ideas of past work related to the moment problem by such mathematicians as Caratheodory Herglotz Schur Riesz and Krein and describes the way the moment problem has interconnected so many diverse areas of research J H B Kemperman examines the moment problem from a geometric viewpoint which involves a certain natural duality method and leads to interesting applications in linear programming measure theory and dilations Donald Sarason first provides a brief review of the theory of unbounded self adjoint operators then goes on to sketch the operator theoretic treatment of the Hamburger problem and to discuss Hankel operators the Adamjan Arov Krein approach and the theory of unitary dilations Exploring the interplay of trigonometric moment problems and signal processing Thomas Kailath describes the role of Szego polynomials in linear predictive coding methods parallel implementation one dimensional inverse scattering problems and the Toeplitz moment matrices Christian Berg contrasts the multi dimensional moment problem with the one dimensional theory and shows how the theory of the moment problem may be viewed as part of harmonic analysis on semigroups Starting from a historical survey of the use of moments in probability and statistics Persi Diaconis illustrates the continuing vitality of these methods in a variety of recent novel problems drawn from such areas as Wiener Ito integrals random graphs and matrices Gibbs ensembles cumulants and self similar processes projections of high dimensional data and empirical estimation

Handbook of Continued Fractions for Special Functions
Annie A.M. Cuyt, Vigdis Petersen, Brigitte Verdonk, Haakon Waadeland, William B. Jones, 2008-04-12

Special functions are pervasive in all fields of science and industry The most well known application areas are in physics engineering chemistry computer science and statistics Because of their importance several books and websites see for instance <http://functions.wolfram.com> and a large collection of papers have been devoted to these functions Of the standard work on the subject the Handbook of mathematical functions with formulas graphs and mathematical tables edited by Milton Abramowitz and Irene Stegun the American National Institute of Standards claims to have sold over 700 000 copies But so far no project has been devoted to the systematic study of continued fraction representations for these functions This handbook is the result of such an endeavour We emphasise that only 10% of the continued fractions contained in this book can also be found in the Abramowitz and Stegun project or at the Wolfram website
