Turing Machines With Sublogarithmic Space Lecture Notes In Computer Science Paperback:

Turing Machines with Sublogarithmic Space Andrzej Szepietowski, 1994-08-29 This comprehensive monograph investigates the computational power of Turing machines with sublogarithmic space The studies are devoted to the Turing machine model introduced by Stearns Hartmanis and Lewis 1965 with a two way read only input tape and a separate two way read write work tape The book presents the key results on space complexity also as regards the classes of languages acceptable under the perspective of a sublogarithmic number of cells used during computation It originates from courses given by the author at the Technical University of Gdansk and Gdansk University in 1991 and 1992 It was finalized in 1994 when the author visited Paderborn University and includes the most recent contributions to the field

Turing Machines with Sublogarithmic Space Andrzej Szepietowski, 1994-08-29 The purpose of this book is to gather contributions from scientists in fluid mechanics who use asymptotic methods to cope with difficult problems The selected topics are as follows vorticity and turbulence hydrodynamic instability non linear waves aerodynamics and rarefied gas flows The last chapter of the book broadens the perspective with an overview of other issues pertaining to asymptotics presented in a didactic way

introduction including background information and an extended review of the literature for Turing Machines Counter Machines and the relevant patterns in Conway's Game of Life so that the subject matter is accessibly to non specialists The book contains a description of the author's Turing machine in Conway's Game of Life including an unlimited storage tape provided by growing stack structures and it also presents a fast universal Turing machine designed to allow the working to be demonstrated in a convenient period of time

How the World Computes Barry S. Cooper, Anuj Dawar, Benedikt Löwe, 2012-05-28 This book constitutes the refereed proceedings of the Turing Centenary Conference and the 8th Conference on Computability in Europe CiE 2012 held in Cambridge UK in June 2012 The 53 revised papers presented together with 6 invited lectures were carefully reviewed and selected with an acceptance rate of under 29.8% The CiE 2012 Turing Centenary Conference will be remembered as a historic event in the continuing development of the powerful explanatory role of computability across a wide spectrum of research areas The papers presented at CiE 2012 represent the best of current research in the area and forms a fitting tribute to the short but brilliant trajectory of Alan Mathison Turing Both the conference series and the association promote the development of computability related science ranging over mathematics computer science and applications in various natural and engineering sciences such as physics and biology and also including the promotion of related non scientific fields such as philosophy and history of computing

A Space Bound for One-tape Multidimensional Turing Machines Michael Conrad Loui, 1979

Turing Computability Robert I. Soare, 2016-06-20 Turing's famous 1936 paper introduced a formal definition of a computing machine a Turing machine This model led to both the development of actual computers and to computability theory the study of what machines can and cannot compute This book presents classical computability theory from Turing and Post to current results and methods and their use in studying the information content of algebraic structures models and their relation to Peano arithmetic The author presents the subject as an art to be practiced and an art in the aesthetic sense of inherent beauty which all mathematicians recognize in their subject Part I gives a thorough development of the foundations of computability from the definition of Turing machines up to finite injury priority arguments Key topics include relative computability and computably enumerable sets those which can be effectively listed but not necessarily effectively decided such as the theorems of Peano arithmetic Part II includes the study of computably open and closed sets of reals and basis and nonbasis theorems for effectively closed sets Part III covers minimal Turing degrees Part IV is an introduction to games and their use in proving theorems Finally Part V offers a short history of computability theory The author has honed the content over decades according to feedback from students lecturers and researchers around the world Most chapters include exercises and the material is carefully structured according to importance and difficulty The book is suitable for advanced undergraduate and graduate students in computer science and mathematics and researchers engaged with computability and mathematical logic
