Tutorial, Programming Language Design Anthony I. Wasserman,1980 Presents programming language design and recent advances in the field **Programming Language Design : Tutorial** Anthony I. Wasserman,1980 **Build Your Own Programming Language** Clinton L. Jeffery,2021-12-31 Written by the creator of the Unicon programming language this book will show you how to implement programming languages to reduce the time and cost of creating applications for new or specialized areas of computing Key Features Reduce development time and solve pain points in your application domain by building a custom programming language Learn how to create parsers code generators file readers analyzers and interpreters Create an alternative to frameworks and libraries to solve domain specific problems Book Description The need for different types of computer languages is growing rapidly and developers prefer creating domain specific languages for solving specific application domain problems Building your own programming language has its advantages It can be your antidote to the ever increasing size and complexity of software In this book you ll start with implementing the frontend of a compiler for your language including a lexical analyzer and parser The book covers a series of traversals of syntax trees culminating with code generation for a bytecode virtual machine Moving ahead you ll learn how domain specific language features are often best represented by operators and functions that are built into the language rather than library functions We ll conclude with how to implement garbage collection including reference counting and mark and sweep garbage collection Throughout the book Dr Jeffery weaves in his experience of building the Unicon programming language to give better context to the concepts where relevant examples are provided in both Unicon and Java so that you can follow the code of your choice of either a very high level language with advanced features or a mainstream language By the end of this book you ll be able to build and deploy your own domain specific languages capable of compiling and running programs What you will learn Perform requirements analysis for the new language and design language syntax and semantics Write lexical and context free grammar rules for common expressions and control structures Develop a scanner that reads source code and generate a parser that checks syntax Build key data structures in a compiler and use your compiler to build a syntax coloring code editor Implement a bytecode interpreter and run bytecode generated by your compiler Write tree traversals that insert information into the syntax tree Implement garbage collection in your language Who this book is for This book is for software developers interested in the idea of inventing their own language or developing a domain specific language Computer science students taking compiler construction courses will also find this book highly useful as a practical guide to language implementation to supplement more theoretical textbooks Intermediate level knowledge and experience working with a high level language such as Java or the C language are expected to help you get the most out of this book [Programming language design](#) ,1980 *Ada* Narain Gehani,1995 Written for readers familiar with at least one procedural programming

language Focus is on novel aspects of Ada Includes an ATandT diskette of examples Annotation copyrighted by Book News Inc Portland OR Design of Very High-level Computer Languages Melvin Klerer,1991 In this fascinating book Melvin Klerer identifies user oriented computer languages which are keyed to the language and notation of the specific scientist engineer or mathematician using it This language is so easily understood that users can write and interact with programs without the aid of programmers Tutorial on Software Design Techniques Peter Freeman,Anthony I. Wasserman,1977 *Trends and Applications: 1981* ,1981 **Trends and Applications** ,1981 *Trends and Applications* Symposium on Trends and Applications,1981 *Handbook of Software Engineering* Charles Ralph Vick,Chittoor V. Jeffery,2024-01-31 Learn to design your own programming language in a hands on way by building compilers using preprocessors transpilers and more in this fully refreshed second edition written by the creator of the Unicon programming language Purchase of the print or Kindle book includes a free PDF eBook Key Features Takes a hands on approach learn by building the Jzero language a subset of Java with example code shown in both the Java and Unicon languages Learn how to create parsers code generators scanners and interpreters Target bytecode native code and preprocess or transpile code into a high level language Book DescriptionThere are many reasons to build a programming language out of necessity as a learning exercise or just for fun Whatever your reasons this book gives you the tools to succeed You ll build the frontend of a compiler for your language and generate a lexical analyzer and parser using Lex and YACC tools Then you ll explore a series of syntax tree traversals before looking at code generation for a bytecode virtual machine or native code In this edition a new chapter has been added to assist you in comprehending the nuances and distinctions between preprocessors and transpilers Code examples have been modernized expanded and rigorously tested and all content has undergone thorough refreshing You ll learn to implement code generation techniques using practical examples including the Unicon Preprocessor and transpiling Jzero code to Unicon You ll move to domain specific language features and learn to create them as built in operators and functions You ll also cover garbage collection Dr Jeffery s experiences building the Unicon language are used to add context to the concepts and relevant examples are provided in both Unicon and Java so that you can follow along in your language of choice By the end of this book you ll be able to build and deploy your own domain specific language What you will learn Analyze requirements for your language and design syntax and semantics Write grammar rules for common expressions and control structures Build a

scanner to read source code and generate a parser to check syntax Implement syntax coloring for your code in IDEs like VS Code Write tree traversals and insert information into the syntax tree Implement a bytecode interpreter and run bytecode from your compiler Write native code and run it after assembling and linking using system tools Preprocess and transpile code into another high level language Who this book is for This book is for software developers interested in the idea of inventing their own language or developing a domain specific language Computer science students taking compiler design or construction courses will also find this book highly useful as a practical guide to language implementation to supplement more theoretical textbooks Intermediate or better proficiency in Java or C programming languages or another high level programming language is assumed
