*Explaining and evaluating price volatility and price levels in world agricultural markets* Palina Moleva, 2017-02-15 The worldwide explosions of agricultural commodity and staple food prices in the years 2007-08 and the subsequent recession related decline in 2009 have not only surprised many market observers but has also caused an intensive discussion about the causes, the consequences and the necessary policy responses. The new price spike in the years 2011 until 2013 and the current price crisis especially for dairy and meat products since 2014-15 revived this debate again and raised the question of how to explain and to evaluate such extreme level shifts and volatilities of agricultural prices and where the prices move in the long run.

Quantitative analysis of neuroanatomy Julian M L Budd, Hermann Cuntz, Stephen J Eglon, Patrik Krieger, 2016-03-22 The true revolution in the age of digital neuroanatomy is the ability to extensively quantify anatomical structures and thus investigate structure-function relationships in great detail. Large scale projects were recently launched with the aim of providing infrastructure for brain simulations. These projects will increase the need for a precise understanding of brain structure e.g. through statistical analysis and models. From articles in this Research Topic we identify three main themes that clearly illustrate how new quantitative approaches are helping advance our understanding of neural structure and function. First, new approaches to reconstruct neurons and circuits from empirical data are aiding neuroanatomical mapping. Second, methods are introduced to improve understanding of the underlying principles of organization. Third, by combining existing knowledge from lower levels of organization, models can be used to make testable predictions about a higher level organization where knowledge is absent or poor. This latter approach is useful for examining statistical properties of specific network connectivity when current experimental methods have not yet been able to fully reconstruct whole circuits of more than a few hundred neurons.
