person in environment perspective has been a central influence in the formation of the profession's knowledge base as well as its approach to practice. Greene provides perspective on how individuals and social systems interact. This book examines how social workers can use theory to shape social work practice by increasing his or her understanding of and potential for enhancing human well-being. Greene covers the relationship between human behavior theory and professional social work practice. She also explores the challenges and limitations of each theory and addresses the following issues: how the theory serves as a framework for social work practice; how the theory lends itself to an understanding of individual, family, group, community, or organizational behavior; what the implications are of the theory for social work interventions or practice strategies; and what role it proposes for the social worker as a change agent. Throughout the profession's history, social workers have turned to a number of theoretical approaches for the organizing concepts needed to define their practice base. The aims of social work to improve societal conditions and to enhance social functioning of and between individuals, families, and groups are put into action across all fields of practice and realized through a variety of methods in a range of settings. This third edition, completely revised, represents a fundamental contribution to the field and like its predecessors will be widely used as a basic text.

The Theory and Practice of Medical Social Work Edna G. Henry, 1924

The Life Model of Social Work Practice Alex Gitterman, Carolyn Knight, Carel B. Germain, 2021-02-02. Originally published in 1980. The Life Model of Social Work Practice was the first textbook to introduce the ecological perspective into social work practice. This fourth edition brings the text up to date by expanding and deepening this perspective. Integrating contemporary theory and research findings with numerous case illustrations drawn from a wide range of practice contexts, this textbook provides students with an invaluable introduction to the real world of social work practice and includes knowledge, methods, and skills for advanced practice. The authors detail the theoretical foundation of the ecological perspective and the life model's emphasis on evidence and ethics-guided practice, culturally competent and diversity-sensitive practice, and the multiple sources of accountability that social workers face. The text features an extensive discussion of the principles of trauma-informed practice and their implications for social work practice. Its discussion of cultural competence and sensitivity to diversity incorporates contemporary concepts such as cultural humility and privilege, intersectionality, and critical race theory and presents their application to practice. The authors integrate current research throughout the text and provide numerous research applications to underscore and model the importance of evidence-guided practice. The fourth edition reflects the National Association of Social Workers Code of Ethics and the Council on Social Work Education's most recent set of competency standards which accredit social work schools and programs. It is accompanied by a teachers' guide that provides chapter summaries, recommended teaching methods and skills, questions for discussion, and suggested assignments, and identifies where in the text the nine EPAS competencies and their associated practice behaviors are addressed.
