Active and Passive Optical Components for WDM Communications, 2003 *Lightwave Technology* Govind P.

Agrawal, 2004-06-02 A comprehensive treatise on the components and devices of the lightwave explosion Multiple advances in lightwave technology have led to a veritable overload of global information systems throughout the world Given the sheer number and growing importance of such systems Govind Agrawal's *Lightwave Technology* answers the need for a comprehensive and up to date account of all major aspects of this rapidly expanding field *Components and Devices* the first independent volume of this two volume engineering resource is devoted to describing a multitude of today's silica and semiconductor based optical devices Conceived and written by the foremost expert and bestselling author in the fiber optic field the text provides detailed in depth coverage of both theoretical and practical aspects of the science including Fiber optics Passive and active fiber components Planar waveguides Semiconductor lasers and amplifiers Optical modulators Photodetectors WDM components Space and time domain switching The second volume *Lightwave Technology Communication Systems* deals with the design and performance of modern transmission systems making use of these devices Complete with chapter problems a CD and a Solutions Manual this title serves as both a basic text book for students and a practical everyday reference for engineers and researchers in the field **Wavelength Filters in Fibre Optics** Herbert

Venghaus, 2006-09-21 Information and communication technologies have been growing and developing steadily for as long as any of us can remember Growth was particularly strong in the last few decades and fibre optic communication systems have become predominant whenever information is to be transmitted over medium or long distances Even when the telecommunication bubble burst at the beginning of the new millennium the only thing which vanished was the expectation of making a fortune by buying and reselling telecom device and equipment manufacturing companies the upgrading of existing fibre optic links and the deployment of new ones continued unabated The reason for the predominance of communication via optical fibres is the vast amount of information a single fibre can carry However in order to take advantage of this potential it is mandatory to transmit different wavelength channels simultaneously over a single optical fibre and the handling of these wavelength channels requires wavelength selective devices or wavelength filters Among the functionalities optical filters have to accomplish are the selection of single or several channels out of a larger number of channels the separation of one channel wavelength from unwanted spurious noise at different wavelengths filters have to support routing enable the lossless or low loss combination of wavelengths and they have to compensate for wavelength dispersion effects *Active and Passive Optical Components for WDM Communications IV* Achyut K. Dutta, 2004 Proceedings of SPIE present the original research papers presented at SPIE conferences and other high quality conferences in the broad ranging fields of optics and photonics These books provide prompt access to the latest innovations in research and technology in their respective fields Proceedings

of SPIE are among the most cited references in patent literature Fiber-Optic Communications Pierre Lecoy,2013-03-01 This book describes in a comprehensive manner the components and systems of fiber optic communications and networks The first section explains the theory of multimode and single mode fibers then the technological features including manufacturing cabling and connecting The second section describes the various components passive and active optical components integrated optics opto electronic transmitters and receivers and optical amplifiers used in fiber optic systems Finally the optical transmission system design is explained and applications to optical networks and fiber optic sensors are detailed including the most recent developments in switched networks high bit rate systems and FTTH or radio over fiber
