

Theoretical Probability

The theoretical probability of an event occurring is

$$\text{Theoretical probability} = \frac{\text{frequency of the event occurring}}{\text{total frequency of possible outcomes}}$$

Mutually exclusive events cannot happen at the same time.

For example, a fair die cannot land on a 3 and a 4 at the same time and a coin flip cannot land on heads and tails at the same time.

If an object (a coin, spinner, or dice for example) is described as **fair**, or **unbiased**, the theoretical probability of each outcome is the same; the theoretical probability of flipping a tails on a fair coin is $\frac{1}{2}$, the theoretical probability of rolling a 2 on a fair 6-sided dice is $\frac{1}{6}$.

Theoretical Statistics

KJ Lindholm-Leary

Theoretical Statistics:

This is likewise one of the factors by obtaining the soft documents of this **Theoretical Statistics** by online. You might not require more era to spend to go to the books creation as without difficulty as search for them. In some cases, you likewise do not discover the declaration Theoretical Statistics that you are looking for. It will no question squander the time.

However below, once you visit this web page, it will be hence totally simple to acquire as well as download guide Theoretical Statistics

It will not undertake many era as we tell before. You can realize it even though pretend something else at home and even in your workplace. consequently easy! So, are you question? Just exercise just what we give under as capably as evaluation **Theoretical Statistics** what you subsequent to to read!
