ESCAPE 10 the 10th European Symposium on Computer Aided Process Engineering held in Florence Italy 7 10th May 2000

The scientific program reflected two complementary strategic objectives of the Computer Aided Process Engineering CAPE

Working Party one checked the status of historically consolidated topics by means of their industrial application and their

emerging issues while the other was addressed to opening new windows to the CAPE audience by inviting adjacent Working

Parties to co operate in the creation of the technical program The former CAPE strategic objective was covered by the topics

Numerical Methods Process Design and Synthesis Dynamics Control Process Modeling Simulation and Optimization The

latter CAPE strategic objective derived from the European Federation of Chemical Engineering EFCE promotion of scientific

activities which autonomously and transversely work across the Working Parties terms of references These activities enhance

the exchange of the know how and knowledge acquired by different Working Parties in homologous fields They also aim to

discover complementary facets useful to the dissemination of tools and of novel procedures As a consequence the Working Parties Environmental Protection Loss Prevention and Safety Promotion and Multiphase Fluid Flow were invited to assist in the organization of sessions in the area of A Process Integrated Approach for Environmental Benefit Loss Prevention and Safety Computational Fluid Dynamics A total of 473 abstracts from all over the world were evaluated by the International Scientific Committee Out of them 197 have been finally selected for the presentation and reported into this book Their authors come from thirty different countries The selection of the papers was carried out by twenty eight international reviewers These proceedings will be a major reference document to the scientific and industrial community and will contribute to the progress in Computer Aided Process Engineering

*Managing the Strategy Process* Balaji S. Chakravarthy,Peter Lorange,1991 *Business Process Engineering* D. Jack Elzinga,Thomas R. Gullledge,Chung-Yee Lee,2012-12-06 Due to growing concern about the competitiveness of industry in the international

marketplace and the efficiency of government enterprises widespread initiatives are currently underway to enhance the competitive posture of firms and to streamline government operations. Nearly all enterprises are engaged in assessing ways in which their productivity, product quality and operations can be improved. These efforts can be described as Business Process Engineering (BPE). BPE had its roots in industry under differing titles: Process Improvement, Process Simplification, Process Innovation, Reengineering etc. It has matured to be an important ingredient of successful enterprises in the private and public sectors. After extensive exploitation by industrial and governmental practitioners and consultants it is attracting increasing attention from academics in the fields of engineering and business. However, even with all of this attention in the popular literature, serious scholarly literature on BPE is in short supply. This is somewhat surprising, especially since so many large international organizations have attempted BPE projects with varied success.

Business Process Improvement: The Breakthrough Strategy for Total Quality, Productivity, and Competitiveness H. James Harrington, 1991-04-22. How to Take the Lead in Business Process Management details how to do it providing a step by step formula that helps companies improve quality and productivity in the support areas.

Process Engineering and Industrial Management Jean-Pierre Dal Pont, 2013-03-04. Process Engineering the science and art of transforming raw materials and energy into a vast array of commercial materials was conceived at the end of the 19th Century. Its history in the role of the Process Industries has been quite honorable and techniques and products have contributed to improve health, welfare and quality of life. Today industrial enterprises which are still a major source of wealth have to deal with new challenges in a global world. They need to reconsider their strategy taking into account environmental constraints, social requirements, profit, competition and resource depletion. Systems thinking is a prerequisite from process development at the lab level to good project management. New manufacturing concepts have to be considered taking into account LCA, supply chain management, recycling, plant flexibility, continuous development, process intensification and innovation. This book combines experience from academia and industry in the field of industrialization, i.e. in all processes involved in the conversion of research into successful operations. Enterprises are facing major challenges in a world of fierce competition and globalization. Process engineering techniques provide Process Industries with the necessary tools to cope with these issues. The chapters of this book give a new approach to the management of technology projects and manufacturing.
