Steemers,1987-07-31 Proceedings of the EC Contractors Meeting held in Brussels Belgium November 13 14 1986 *Solar Energy Applications to Buildings and Solar Radiation Data* T.C. Steemers,2012-12-06 This volume provides a valuable overview of the Commission s current activities in research on solar radiation data and in the development of solar energy applications in buildings It contains the proceedings of the second contractors co ordination meeting in the third four year R D programme 1985 88 in these two fields which was held in Brussels on 1 and 2 October 1987 The first meeting was held on 13 and 14 November 1986 The research contractors reports presented in this book give a full account of activities at an important stage in the programme where most projects have completed their preparatory stages and productive research is now fully underway A feature of the reports is the pattern they illustrate of working groups in which practically all of the Member states are represented co operating in the attainment of common goals within a co ordinated European programme The meeting was attended by 60 participants and extended over two days Presentations were made by the contractors on the objectives of their projects progress made in the research and future work plans and priorities Each presentation was followed by a short discussion The meeting was also important in improving communications between the research groups exposing opportunities for co operation and collaboration and monitoring progress Among key achievements reported in the area Solar Radiation Data is the implementation of a network of measuring stations at eight proto typical sites throughout Europe **Solar Energy**

Lim,2012-12-06 Renewable energy sources such as solar energy were advocated even before the energy crisis in 1973 Subsequent development in solar energy has been remarkable Indeed it has been one of the most studied and researched topics in recent years Much of the technology in the utilization of solar energy has been associated with housing and industrial applications and to a smaller extent with commercial use The nature of the utilization has been related to the philosophy of independence or autonomy in that each housing or industrial unit is made self sufficient by the installation of solar energy equipment The general aim of the development of solar energy has been to substitute existing energy sources by solar energy especially among the developed countries in the temperate regions In developing countries the application of solar technology has been more acceptable in rural areas where conventional infrastructure is under developed A different direction is necessary for the development of solar energy in urban areas Buildings are inter related and have been dependent on the conventional infrastructure The consumption of energy is many times more than that in the rural areas A new approach to urban development must be generated and studies should be made on the feasibility and viability of using solar energy for urban settlements
