Virtual Reality Office Manual:

A Handbook of Theories on Designing Alignment Between People and the Office Environment Rianne Appel-Meulenbroek, Vitalija Danivska, 2021-06-16 Although workplace design and management are gaining more and more attention from modern organizations workplace research is still very fragmented and spread across multiple disciplines in academia There are several books on the market related to workplaces facility management FM and corporate real estate management CREM disciplines but few open up a theoretical and practical discussion across multiple theories from different fields of studies Therefore workplace researchers are not aware of all the angles from which workplace management and effects of workplace design on employees has been or could be studied A lot of knowledge is lost between disciplines and sadly many insights do not reach workplace managers in practice Therefore this new book series is started by associate professor Rianne Appel Meulenbroek Eindhoven University of Technology the Netherlands and postdoc researcher Vitalija Danivska Aalto University Finland as editors published by Routledge It is titled *Transdisciplinary Workplace Research and Management* because it bundles important research insights from different disciplinary fields and shows its relevance for both academic workplace research and workplace management in practice The books will address the complexity of the transdisciplinary angle necessary to solve ongoing workplace related issues in practice such as knowledge worker productivity office use and more strategic workplace management In addition the editors work towards further collaboration and integration of the necessary disciplines for further development of the workplace field in research and in practice This book series is relevant for workplace experts both in academia and industry This first book in the series focuses on the employee as a user of the work environment The 21 theories discussed and applied to workplace design in this book address people's ability to do their job and thrive in relation to the office workplace Some focus more on explaining why people behave the way they do the psychosocial environment while others take the physical and or digital workplace quality as a starting point to explain employee outcomes such as health satisfaction and performance They all explain different aspects for achieving employee workplace alignment EWA and thereby ensuring employee thriving The final chapter describes a first step towards integrating these theories into an overall interdisciplinary framework for eventually developing a grand EWA theory The Open Access version of this book available at <http://www.taylorfrancis.com/books/e/9781003128830> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

P. Goodstein,1994-08-16 Powerful information technologies and the complex support systems they engender are evolving faster than people s ability to adjust to them In the workplace this leads to troublesome task performance added stress on users increased organizational inefficiency and in some cases a heightened risk of wide scale disaster In the marketplace it makes for consumer dissatisfaction Clearly traditional human computer interaction HCI and system design SD solutions to this dilemma have proven woefully inadequate What is needed is a fresh multidisciplinary approach offering a broader more dynamic framework for assessing needs and designing usable efficient systems Taking modeling concepts from engineering psychology cognitive science information science and computer science cognitive systems engineering CSE provides such a framework This book

is the first comprehensive guide to the emerging new field of CSE Providing equal parts theory and practice it is based on the authors many years of experience with work systems in a wide range of work domains including process control manufacturing hospitals and libraries Throughout the emphasis is on powerful analytical techniques that enhance the systems designer s ability to see the big picture and to design for all crucial aspects of human work interaction Applicable to highly structured technical systems such as process plants as well as less structured user driven systems like libraries these analytical techniques form the basis for the evaluation and design guidelines that make up the bulk of this book And since the proof is in the pudding the authors provide a chapter length case history in which they demonstrate the success of their approach when applied to a full scale software design project The project a retrieval system for public libraries is described in detail from field studies to concept validation experiments and of course the empirical evaluation of the system while in use by the library users and personnel Computer based information systems are rapidly becoming a fundamental part of the human landscape How that landscape evolves over the next decade or so whether it becomes a hostile one or one that generously supports the needs of future generations is in the hands of all those involved with the study and design of information systems
