## Wave Forms:

Electronics via Waveform Analysis Edwin C. Craig, 2012-12-06 The author believes that a good basic understanding of electronics can be achieved by detailed visual analyses of the actual voltage waveforms present in selected circuits The voltage waveforms included in this text were photographed using a 35 mm camera in an attempt to make the book more attractive This book is intended for the use of students with a variety of backgrounds For this reason considerable material has been placed in the Appendix for those students who find it useful The Appendix includes many basic electricity and electronic concepts as well as mathematical derivations that are not vital to the understanding of the circuit being discussed in the text at that time Also some derivations might be so long that if included in the text it could affect the concentration of the student on the circuit being studied The author has tried to make the book comprehensive enough so that a student could use it as a self study course providing one has access to adequate laboratory equipment

**Advances in Waveform-agile Sensing for Tracking** Sandeep Prasad Sira, Antonia Papandreou-Suppappola, Darryl Morrell, 2009 Recent advances in sensor technology and information processing afford a new flexibility in the design of waveforms for agile sensing Sensors are now developed with the ability to dynamically choose their transmit or receive waveforms in order to optimize an objective cost function This has exposed a new paradigm of significant performance improvements in active sensing dynamic waveform adaptation to environment conditions target structures or information features The manuscript provides a review of recent advances in waveform agile sensing for target tracking applications A dynamic waveform selection and configuration scheme is developed for two active sensors that track one or multiple mobile targets A detailed description of two sequential Monte Carlo algorithms for agile tracking are presented together with relevant Matlab code and simulation studies to demonstrate the benefits of dynamic waveform adaptation The work will be of interest not only to practitioners of radar and sonar but also other applications where waveforms can be dynamically designed such as communications and biosensing
