String Instruments:

The Science of String Instruments Thomas D. Rossing, 2010-12-15 Thomas D Rossing String instruments are found in almost all musical cultures Bowed string instruments form the backbone of symphony orchestras and they are used widely as solo instruments and in chamber music as well Guitars are used universally in pop music as well as in classical music The piano is probably the most versatile of all musical instruments used widely not only in ensemble with other musical instruments but also as a solo instrument and to accompany solo instruments and the human voice In this book various authors will discuss the science of plucked bowed and hammered string instruments as well as their electronic counterparts We have tried to tell the fascinating story of scientific research with a minimum of mathematics to maximize the usefulness of the book to performers and instrument builders as well as to students and researchers in musical acoustics Sometimes however it is difficult to translate ideas from the exact mathematical language of science into words alone so we include some basic mathematical equations to express these ideas It is impossible to discuss all families of string instruments Some instruments have been researched much more than others Hopefully the discussions in this book will help to encourage further scientific research by both musicians and scientists alike

1 1 A Brief History of the Science of String Instruments Quite a number of good histories of acoustics have been written Lindsay 1966 1973 Hunt 1992 Beyer 1999 and these histories include musical acoustics

Handbook of Materials for String Musical Instruments Voichita Bucur, 2016-08-29 This book addresses core questions about the role of materials in general and of wood in particular in the construction of string instruments used in the modern symphony orchestra violins violas cellos and basses Further attention is given to materials for classical guitars harps harpsichords and pianos While some of the approaches discussed are traditional most of them depend upon new scientific approaches to the study of the structure of materials such as for example wood cell structure which is visible only using modern high resolution microscopic techniques Many examples of modern and classical instruments are examined together with the relevance of classical techniques for the treatment of wood Composite materials especially designed for soundboards could be a good substitute for some traditional wood species The body and soundboard of the instrument are of major importance for their acoustical properties but the study also examines traditional and new wood species used for items such as bows the instrument neck string pegs etc Wood species properties for musical instruments and growth origins of woods used by great makers such as Antonio Stradivari are examined and compared with more recently grown woods available to current makers The role of varnish in the appearance and acoustics of the final instrument is also discussed since it has often been proposed as a secret ingredient used by great makers Aspects related to strings are commented As well as discussing these subjects with many illustrations from classical and contemporary instruments the book gives attention to conservation and restoration of old instruments and the physical results of these techniques There is also discussion of the current value of old instruments both for modern performances and as works of art

Stringed Instruments Jon Whiteley, 2008 The Ashmolean s collection of European stringed instruments is not large but it is very famous Several of the instruments in the Ashmolean are among the rarest and most beautiful of their kind and most are in some way exceptional The collection was founded on a group of instruments which was given to the museum by the firm of W E Hill Sons in 1939 and has since been increased by two bequests and by an important group of bows and instruments given by Albert Cooper in 1999 The firm of W E Hill Sons was founded in 1880 and by the early 20th century the firm had achieved an unrivalled reputation in making restoring and selling stringed instruments In the course of handling and repairing instruments the Hills became increasingly aware of the damage that was being inflicted on early viols and violins by constant playing and repeated restoration This concern gave rise to the idea of donating a select group of rare instruments to a museum where they would be preserved from further harm and the first instruments were handed over in 1939 The present handbook discusses and illustrates every stringed instrument in the collection and is chiefly intended for the many visitors to the Hill Collection and for the wider public who might wish for more information about the instruments and some background history
