Innovation in China Richard P. Appelbaum, Cong Cao, Xueying Han, Rachel Parker, Denis Simon, 2018-10-15 China is in the midst of transitioning from a manufacturing based economy to one driven by innovation and knowledge This up to date analysis evaluates China's state led approach to science and technology and its successes and failures In recent decades China has seen huge investments in high tech science parks a surge in home grown top ranked global companies and a significant increase in scientific publications and patents Helped by state policies and a flexible business culture the country has been able to leapfrog its way to a more globally competitive position However the authors argue that this approach might not yield the same level of progress going forward if China does not address serious institutional organizational and cultural obstacles While not impossible this task may well prove to be

more difficult for the Chinese Communist Party than the challenges that China has faced in the past
