

Is Stimulus Sampling Theory a Model?

- “The term ‘stimulus sampling theory’ refers to a number of theories differing with respect to special assumptions and their mathematical expression, yet sharing a common approach to conceptual representation of the stimulus situation and the formation of associative connections, rather than to a single coherent set of assumptions formulated to apply to all the experimental procedures employed in the study of learning” (p. 1).

Anderson,2013-05-13 Published in 1976 Language Memory and thought is a valuable contribution to the field of Cognitive Psychology This book presents a theory about human cognitive functioning a set of experiments testing that theory and a review of some of the literature relevant to the theory The theory is embodied in a computer simulation model called ACT **Estes' Stimulus Sampling Theory and Massed Versus Spaced Advertising Schedules** Sanjay Mishra,2016 Few studies offer a theoretical explanation of the differential effects of massed and spaced advertising Consequently conclusions have been mixed The authors introduce the stimulus sampling model of spacing effects based on Estes mathematical learning theory The model posits that massed repetition generates superior memory at short retention intervals whereas spaced repetition produces superior memory at longer retention intervals Data from various studies are analyzed and implications and potential applications of the model in the advertising context are explored

From Learning Theory to Connectionist Theory Alice F. Healy,Stephen M. Kosslyn,Richard M. Shiffrin,2013-04-15 These two volumes consist of chapters written by students and colleagues of W K Estes The books contributors themselves eminent figures in the field reflect on Estes sweeping contributions to mathematical as well as cognitive and experimental psychology As indicated by their titles Volume I features mathematical and theoretical essays and Volume II presents cognitive and experimental essays Both volumes contain insightful literature reviews as well as descriptions of exciting new theoretical and empirical advances Many of the essays also incorporate personal reminiscences reflecting the authors fond affection for their illustrious mentor **Non-random Stimulus Sampling in Statistical Learning Theory** William Frederick Prokasy,1960

STIMULUS SAMPLING PATTERN RECOGNITION. ,1963 A generalized computer model was constructed to simulate the behavior of organisms according to various versions of stimulus sampling theory Results already reported dealt with the

learning behavior of rats in a T maze With the addition of new routines to specify the simulated environment of the simulated organism a similar basic program has learned to discriminate among visual patterns consisting of carelessly hand drawn alphabetic characters each of which is presented in a number of variations Input to the program is a binary representation of the presence or absence of parts of the figure in a 20 x 20 matrix superimposed on the figure to be recognized Each cell of the matrix is treated as a separate stimulus having various numbers of elements as associated with all the responses that can be made A random sample of elements from stimuli present in the visual field is used to determine the response any trial When a correct response is made all elements sampled on that trial become associated with that response Changes in learning rates occur as the probability of selecting available stimulus elements is changed
