The Unity Of Life:

Introduction to a Phenomenology of Life Renaud Barbaras, 2022-01-04 In *Introduction to a Phenomenology of Life* renowned French philosopher Renaud Barbaras aims to construct the basis for a phenomenology of life. Called an introduction because it has to deal with philosophical limits and presuppositions, it is much more as Barbaras investigates life in its phenomenological senses approached through the duality of its intransitive and transitive senses. Originally published in French as *Introduction à une phénoménologie de la vie*, *Introduction to a Phenomenology of Life* first defines the problem of life phenomenologically, then studies the failures of the phenomenological movement to adequately think about life, and finally elaborates a new original and productive approach to the problem. Combining original interpretations and expert readings of philosophers such as Heidegger, Henry Bergson, and Merleau-Ponty, Barbaras offers a powerful and important contribution to phenomenology and continental thought.

Levels of Organic Life and the Human Helmuth Plessner, 2019-07-02 The groundbreaking classic of twentieth-century German philosophy, now available in English with an introduction by J. M. Bernstein, Helmuth Plessner's *Levels of Organic Life and the Human* draws on phenomenological, biological, and social scientific sources to offer a systematic account of nature, life, and human existence. The book considers non-living nature, plants, non-human animals, and human beings as a sequence of increasingly complex modes of boundary dynamics, simply put, interactions between a thing's insides and the surrounding world. Living things are classed and analyzed by their positionality or orientation to and within an environment. According to Plessner's radical view, the human form of life is excentric, that is, the relation between body and environment is something to which humans themselves are positioned and can take a position. This excentric positionality enables human beings to take a stand outside the boundaries of their own body, a possibility with significant implications for knowledge, culture, religion, and technology. A powerful and sophisticated account of embodiment, *Levels* shows, with reference both to science and to philosophy, how life can be seen on its own terms to establish its own boundaries and how, from the standpoint of life, the human establishes itself in relation to the non-human. As such, the book is not merely a historical monument but a source for invigorating a range of vital current conversations around the animal, posthumanism, the material turn, and the biology and sociology of cognition.
