Weed Control Methods for River Basin Management E.O. Gangstad,2018-05-04 Aquatic plants continue to create problems associated with navigation flood control agriculture irrigation and drainage values of lands conservation of wildlife and fisheries and water resource supply While much research is being done to find more effective and economic control measures there is now a great need to apply known facts to achieve a measure of control by the means available It is the purpose of this volume to provide a scientifically documented treatise of the known facts as they apply to the control of aquatic weeds in river basins and their allied waterways with particular emphasis on alligator weed and water hyacinth

Residue of 2,4-D Edward O. Gangstad,1979 When a herbicide has entered a body of water it begins to dissipate at a rate affected by the 1 water depth 2 mean temperature 3 rate of treatment and 4 time after treatment In the case of moving waters the dissipation rate can also be affected by volume dilution as a function of the surface area to the total area and the time as a function of the rate of flow Because of dilution herbicide residues may be quickly eliminated from water but residues in the bottom mud may remain for several months or longer depending on the pH of the water the type of clay and the herbicide used In addition to dilution photo chemical and biological degradation play a large part in herbicide removal In fact laboratory studies show that microbial activity is the major factor involved in herbicide degradation Organic herbicides such as 2 4 D are relatively nontoxic to animals and when used properly cause a minimum of injury to aquatic flora and fauna Numerous feeding studies show that herbicides are rapidly excreted in body wastes with little or no signs of accumulation in tissue It follows that fragmentation of the herbicide molecule through metabolism can actually result in detoxification and the

formation of utilizable products In the case of 2 4 D these end products are CO₂ H₂O and a chloride or a terminal residue of a more complex molecule Author Landscape Planning ,1982 **Environment Abstracts** ,1984 Aquatic Biology and Hydroelectric Power Development in New Zealand Paul R. Henriques,1987 This book summarizes current knowledge of hydroelectric power development as it relates to aquatic biology in New Zealand The first section summarizes the country s hydroelectric resources and their utilization The legal and planning framework associated with hydroelectric power development and the environment is covered in the second section The third section deals with management and improvement techniques The final section encompasses environmental investigations for future hydroelectric power development and comprises chapters concerned mostly with environmental impact assessment including prediction of impact on phytoplankton periphyton aquatic macrophytes invertebrates fish and wetland birds
