Forecasting and Timing Markets: a Quantitative Approach Henry Liu, 2021-04-15 Financial markets are essentially time series data driven events consisting of valleys peaks and in betweens of ups and downs For more than a century many pioneers had attempted to come up with various theoretical models to facilitate forecasting and timing market moves For example as early as in 1902 or 119 years ago S A Nelson a friend of Charles H Dow attempted to explain Dow s methods in his book titled *The A B C of Stock Speculation* which became later known as the Dow Theory 20 years later in 1922 William Peter Hamilton carried on and wrote the book *The Stock Market Barometer* which explained the Dow Theory in more detail More recently in the last few decades the advent of advanced computing technologies helped create numerous technical indicators such as Relative Strength Index RSI by J Welles Wilder 1978 Moving Average Convergence Divergence MACD by Gerald Appel 2005 Stochastic Oscillator SO by George Lane 2007 and Bollinger Bands BB by John Bollinger 2002 etc Those powerful theories and indicators have been heavily studied and well known in the financial circle However they are empirical and lack quantitative verifications out of solid backtest results This book helps fill these vacancies This text attempts to help explore how one can forecast and time markets more quantitatively For this purpose the author developed a model based system named AlphaCovaria to help demonstrate how to use various simplest readily available technical indicators to forecast and time markets approximately while eliminating subjective speculations at the same time Centered on various math models the author s AlphaCovaria system has three main components an AlphaCurve program for charting a BTDriver program for running all backtests and an AlphaCovaria driver for generating buy sell signals based on symbol profiles learned through backtests This kind of formula driven approach is more promising for building more high performance strategies The text is made concise and precise of about 100 pages only as a working method does not need to be wordy Math models data and charts can help explain more effectively and convincingly Also inspired by those classical models the author came up with a new indicator named simple cascading indicator sci which beat all those classical models in most cases based on the backtest results with 29 carefully selected symbols and past 15 years price data This 2nd edition of the book also shared my live trading experience using real money in my Fidelity and eTrade accounts with my AlphaCovaria system Such data can be found nowhere else
