*Understanding Agent Systems* Mark d'Inverno, Michael M. Luck, 2004 This book helps to organise the diverse landscape of agent based systems by applying formal methods to provide a defining and encompassing agent framework The Z specification language is used to provide an accessible and unified formal account of agent systems and inter agent relationships In particular the framework precisely and unambiguously provides meanings for common concepts and terms for agent systems enables alternative agent models and architectures to be described within it and provides a foundation for subsequent development of increasingly more refined agent concepts It describes agents the relationships between them and the requisite capabilities for effective functioning in multi agent systems and is applied in different case studies In the second edition the authors have revised and updated the existing chapters of the book to respond to advice from readers of the first edition to add references to recent work in agent systems and generally to bring the content up to date They have extended the introduction and conclusions chapters to include a better review of the field and the current state of the art This new edition features chapters on agent interaction and norms and outlines an implementation framework The book will appeal equally to researchers students and technologists interested in intelligent agents and multi agent systems Comments from experts in the field An excellent book that lays out a clear conceptual framework for studying and analysing agent based systems Nick Jennings Mark d'Inverno and Michael Luck have over the last six or seven years been at the forefront of European research in agent systems This book poses some important foundational questions about agents and their interactions in multi agent systems and answers them in a coherent and convincing way It is an extremely valuable contribution to the field Michael Georgeff It is undoubtedly a clear and most comprehensive attempt to describe agent based systems in a unified manner Simon Parsons

*Understanding Agent Systems* Mark d'Inverno, Michael Luck, 2013-12-20  
Around ten years ago when we were both PhD students working on different but related aspects of artificial intelligence we shared an office in the furthest corner of the Department of Computer Science at University College London Our friendship began then but our professional collaboration only really got going when we both left one of us moving the few yards to the University of Westminster and the other further afield to the University of Warwick and later the University of Southampton Nevertheless we can trace back many of our inspirations to those days at UCL in discussions with Derek Long John Campbell Maria Fox and John Wolstencroft who all contributed to our initial enthusiasm for working in this area On leaving UCL however we tried to bring our research interests together in the newly emerging area of agent based systems but found difficulties in communication with each other over basic terms and concepts simply due to the immaturity of the field In other words the problems we had in finding a base on which to develop our ideas set us on a long path over a number of years resulting in our construction and refinement of a conceptual framework within which to define analyse and explore different aspects of agents and multi agents systems This is the work reported in this book

**Systems** Mark D'Inverno,2001 This book presents a formal approach to dealing with agents and agent systems The Z specification language is used to establish an accessible and unified formal account of agent systems and inter agent relationships In particular the framework provides precise and unambiguous meanings for common concepts and terms for agent systems allows for the description of alternative agent models and architectures and serves as a foundation for subsequent development of increasingly refined agent concepts The practicability of this approach is verified by applying the formal framework to three detailed case studies The methodology presented takes a very significant step towards organising and structuring the diverse and disparate landscape of agent based systems by applying formal methods to develop a defining and encompassing agent framework The book will appeal equally to researchers students and professionals in industry
