

Understanding GERD

Gastroesophageal Reflux Disease

What is GERD?

The esophagus is the tube that carries food and liquid from the mouth to the stomach. The lower esophageal sphincter (LES) is a ring of muscle that acts as a valve between the esophagus and the stomach. When the LES relaxes, it allows food and liquid to pass from the esophagus into the stomach. When the LES contracts, it prevents stomach contents from flowing back up into the esophagus. In GERD, the LES does not contract properly, allowing stomach acid to flow back up into the esophagus. This can cause heartburn, regurgitation, and other symptoms.

The lower esophageal sphincter

The lower esophageal sphincter (LES) is a ring of muscle that acts as a valve between the esophagus and the stomach. When the LES relaxes, it allows food and liquid to pass from the esophagus into the stomach. When the LES contracts, it prevents stomach contents from flowing back up into the esophagus. In GERD, the LES does not contract properly, allowing stomach acid to flow back up into the esophagus.

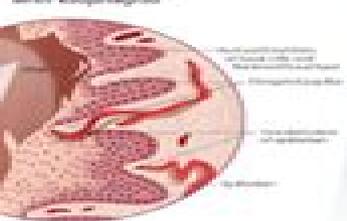

Lower esophageal sphincter (normally closed)

Lower esophageal sphincter (relaxed)

Esophageal lining with esophagitis

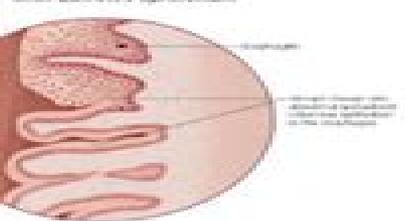

Esophagitis

Esophagitis is inflammation of the lining of the esophagus. It is caused by stomach acid refluxing back up into the esophagus. Symptoms include heartburn, regurgitation, and difficulty swallowing. Treatment includes lifestyle changes and medication.

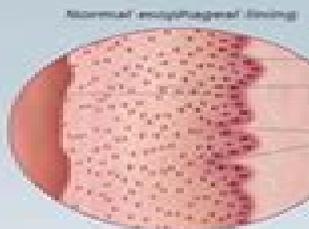

Esophageal lining with Barrett's esophagus

Barrett's esophagus

Barrett's esophagus is a condition in which the lining of the esophagus changes from normal esophageal lining to intestinal-type lining. This change is caused by long-term acid reflux. It is a precancerous condition, meaning it can lead to esophageal cancer. Treatment includes lifestyle changes and medication.

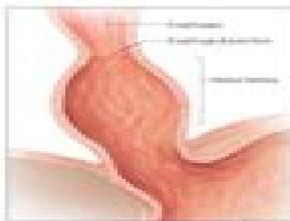

Taking control of GERD

- Eat a balanced diet with less fat, sugar, and caffeine.
- Avoid alcohol, tobacco, and spicy foods.
- Lose weight if you are overweight.
- Don't eat or drink right before going to bed.
- Elevate the head of your bed.
- Avoid tight-fitting clothing.
- Stop smoking.
- Avoid late eating and drinking.
- Chew all of your food thoroughly.
- Avoid lying down after eating.

Stomach acid

Stomach acid is a mixture of hydrochloric acid and other substances. It is produced by the stomach to help break down food and kill bacteria. In GERD, stomach acid flows back up into the esophagus, causing irritation and damage.

Gastric gland

Hiatal hernia

Hiatal hernia and GERD

A hiatal hernia occurs when part of the stomach protrudes through the diaphragm. This can lead to GERD because the stomach acid is closer to the esophagus, making it easier for acid to reflux.

Diet and medication

There are several ways to manage GERD. Diet changes, such as eating smaller meals and avoiding trigger foods, can help. Medication, including antacids, H2 blockers, and proton pump inhibitors, can also be used to reduce stomach acid and relieve symptoms.
